

# VicHub Pipeline

## Basis of Preparation

Public

Year ended 31 December 2022

Page intentionally blank

## OVERVIEW

The Australian Energy Regulator (**AER**) issued a non-scheme pipeline financial reporting guideline (**the Guideline**) in December 2017 under Part 23 of the National Gas Rules. This Guideline requires service providers of such pipelines to publish certain financial information about those pipelines.

Due to the operation of National Gas Rules Schedule 6 Rule 22, this Guideline applies to the VicHub Pipeline (**VicHub**) for the reporting period 1 January to 31 December 2022.

To apply the Guideline we have adopted the following general interpretations:

- All Jemena Group<sup>1</sup> legal entities that have a controlling interest in VicHub are ‘service providers’ and so all costs incurred, revenue earned or assets owned by those entities that relate to the pipeline should be captured and consolidated in the financial reporting templates.
- Similarly, because SGSPAA is the parent company of the Jemena Group, acquisition costs and associated dates (mainly in the Recovered Capital Method (**RCM**) template) are determined by reference to that entity for the purposes of complying with the Guideline. This means for instance that the acquisition of VicHub occurred on 1 Aug 2007 when the Jemena Group acquired the pipeline from the Alinta Group.
- Actual information includes information calculated directly from information contained in the Jemena Group’s systems and other records without material judgement required. Estimated information is anything other than actual information.
- To meet the requirements of the Guideline when compiling the RCM valuation (section 4.1) VicHub undertook all reasonable steps to obtain historical information where this was not already available to Jemena. These steps are further explained in the RCM section (section 13) of this basis of preparation.
- All ‘Previous reporting period’ amounts have been sourced from the prior year published Gas Market Reform (GMR) templates (refer to Tables: 2.1, 2.1.1, 3.1, 3.3).
- Jemena Group costs are direct or indirect in nature. Direct costs, such as maintenance, program management, engineering support are directly allocated to specific assets within the Jemena Group. Jemena Group shared or indirect costs such as IT, finance, legal, people, safety and environment are allocated to specific assets within the Jemena Group in accordance with the principles of the Jemena Group Cost Allocation Methodology procedure. These principles are further explained in the Revenue and Expenses section (section 3) of this basis of preparation.

The rest of this basis of preparation document explains how we have populated each of the templates required by the Guideline, including by identifying where estimated data was used when actual data was not available.

As per the Jemena Group access user guide, Jemena VicHub Pipeline Pty Ltd is the service provider for VicHub, being the licensed operators. The other service providers in the Jemena Group have appointed Jemena VicHub Pipeline Pty Ltd as the responsible service provider for the purposes of publishing the financial information.

---

<sup>1</sup> The Jemena Group includes SGSP (Australia) Assets Pty Ltd (**SGSPAA**) and its subsidiaries excluding Zinfra Pty Ltd and its subsidiaries. Jemena Group costs may include charges from Zinfra Pty Ltd and its subsidiaries where they relate to the pipeline.

## 1. PIPELINE INFORMATION

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 1.1: Pipeline Details	No BoP Reference cells in the template	Pipeline details	Actual	<p><u>Pipeline Location and Length</u></p> <p>The data is sourced either from the original as-built survey data, or where that is not available from the results of intelligent pigging data.</p> <p><u>Number of Customers</u></p> <p>PypIT System (defined below) per description below for the Table 5.1 Weighted Average Prices.</p> <p><u>Service Type</u></p> <p>As per pipeline type on AEMC's gas scheme register <a href="https://www.aemc.gov.au/energy-system/gas/gas-scheme-register">https://www.aemc.gov.au/energy-system/gas/gas-scheme-register</a> and meets the definition of a transmission pipeline under the National Gas Law.</p>	<p><u>Pipeline Location and Length</u></p> <p>The pipeline lengths are calculated in the Geographic Information System (GIS) by summing the geometric lengths of the pipeline and all its laterals.</p> <p><u>Number of Customers</u></p> <p>Determined from a revenue report run in PypIT outlining the breakdown of revenue by service type and shipper. The report was run for the relevant period to determine the number of shippers whom we have earned revenue from.</p>	N/A
Table 1.2: Pipeline Services Provided	No BoP Reference cells in the template	Pipeline services provided	Actual	<p>PypIT (Is the billing/invoicing system used by VicHub which provides the detailed breakdown of volumes and revenue data by service type and shipper as well as the corresponding contract information).</p>	<p>Based on current service offerings as described below.</p> <p><u>Service description</u></p> <p>A revenue transaction report that discloses revenue by service types, was downloaded from PypIT for the reporting period. A Subject Matter Expert mapped the revenue service types against the relevant 'Service description' categories based on the nature of the underlying revenue transactions and customer contracts.</p>	N/A

## 1 — PIPELINE INFORMATION

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p>Where a service exists but has not been used by a customer during the year it is considered to not be a service provided.</p> <p><u>Provided to non-related parties</u> All services were provided to non-related parties in accordance with PypIT customer listing and relevant supporting contracts.</p> <p><u>Provided to related parties</u> No services were provided to related parties.</p>	

## 2. FINANCIAL PERFORMANCE MEASURES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 1.1.1: Return on assets	No BoP Reference cells in the template	Earnings before interest and tax, Total assets, Return on assets	Actual	N/A – Populated based on formulas referencing supporting schedules.	<p>All categories in this template are based on the Australian Energy Regulator's (<b>AER</b>) designed formulae that references the supporting tables within the workbook.</p> <p><u>Earnings before interest and tax</u> References earnings before interest and tax (<b>EBIT</b>) in 'Table 2.1: Statement of pipeline revenues and expenses'.</p> <p><u>Total assets</u> References total assets in 'Table 3.1: Pipeline assets'</p> <p><u>Return on assets</u> Calculated as: Earnings before interest and tax divided by Total Assets.</p>	N/A

## 3 — REVENUES AND EXPENSES

### 3. REVENUES AND EXPENSES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 2.1 Statement of pipeline revenues and expenses	2.1.a	Description	Actual	<p>Populated based on formulas referencing supporting schedules.</p> <p>SAP</p> <p>SAP</p>	<p><u>Total service revenue</u> References 'Total service revenue' in 'Table 2.1.1 Revenue by service'.</p> <p><u>Customer Contributions Revenue</u> References 'Total' in 'Table 2.2.1: Customer contributions received'.</p> <p><u>Government Contributions Revenue</u> References 'Total' in 'Table 2.2.2: Government contributions received'.</p> <p><u>Profit from sale of fixed assets</u> VicHub captures such amounts in its accounting systems and was sourced from the VicHub's Trial Balance (TB).</p> <p><u>Other direct revenue</u> Includes: <ul style="list-style-type: none"> <li>Items that are not pipeline service related and are miscellaneous in nature. VicHub collects such items using costs elements and projects.</li> </ul> </p> <p><u>Other revenue</u></p>	N/A

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					References the 'Total' in 'Table 2.3.1: Indirect revenue allocation'	
Table 2.1 Statement of pipeline revenues and expenses	2.1.b	Direct Costs, Shared Costs, Earnings before interest and tax (EBIT)	Actual	ERP System (SAP)	<p>Most of the entities within SGSPAA and its controlled entities use an Enterprise Resource Planning (ERP) system known as SAP to collect costs. VicHub as part of the Jemena Group, uses SAP to record its financial transactions. Costs are collected in planned maintenance orders (PMO) that cascade up to projects (WBS elements) in SAP based on the activity, on which an employee works or where an external supplier provides goods/services.</p> <p>A reporting tool (BI) is used to download the operating expenditure costs from SAP. The data is aggregated by WBS element and general ledger account code (cost element) and mapped into the relevant cost category of the template.</p> <p><u>Related party and non-related party</u></p> <p>The majority of costs that VicHub incurs are sourced from a related entity, the Eastern Gas Pipeline (EGP), which is part of the Jemena Group. EGP records costs that are attributable to VicHub as these business units are on the same site. The EGP and VicHub Maintenance Manager did a cost build up calculation for wage costs attributable to VicHub. An appropriate financial transaction was recorded in the accounting systems. These costs are reported in the 'related party transactions' column. Where project costs are collected directly to the pipeline and not through a related</p>	N/A

### 3 — REVENUES AND EXPENSES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p>party entity they were reported in the 'amounts excluding related party transactions' column.</p> <p><u>Direct costs and Shared costs</u></p> <p>Direct and shared cost classification is based upon the activity/service category codes included as part of the WBS element structure for each project. An activity mapping table is used to map activities into relevant cost categories:</p> <ul style="list-style-type: none"> <li>• Direct Costs: Asset Management (Asset: Strategy, Planning, Investment, Information and Management system activities), Service Delivery (Construction &amp; Supply Chain, Maintenance &amp; Faults, Network Control &amp; Emergency Maintenance, Metering, Customer Service).</li> <li>• Shared Costs: The Jemena Group only allocates costs that are specifically attributable to VicHub's Shared costs such as insurance and external audit costs.</li> </ul> <p><u>Mapping into the template categories</u></p> <p>The cost element description field from costs within VicHub was used to map into the template's categories (e.g. 'wages', 'other direct costs', 'employee costs', 'indirect operating expenses', etc.). VicHub has interpreted direct wages as the payroll costs assigned to staff who directly work on the VicHub.</p> <p>Where project descriptions and activity/service category codes support classification within a more specific category</p>	

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					then the cost element based mapping was overridden <sup>2</sup> . The following description categories were populated based on project description/activity code mapping: <ul style="list-style-type: none"> <li>• Repairs and maintenance</li> </ul> <u>Earnings before Interest and tax (EBIT)</u> EBIT is calculated as: Total revenue less Total costs	
Table 2.1 Statement of pipeline revenues and expenses	2.1.c	Depreciation, Shared Asset Depreciation	Actual	SAP – Fixed Asset Movement Report ( <b>FAMR</b> ) and Equipment Register  The SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill)	<u>SAP FAMR</u> A detailed FAMR was downloaded from SAP.  <u>SGSPAA Group Consolidation supporting schedule</u> Depreciation expense was extracted from the SGSPAA Group Consolidation supporting schedule for pipeline assets not included in the SAP FAMR.  Total depreciation was classified to direct depreciation only as VicHub does not have any shared assets. Depreciation is based on the mapping of the individual assets in the FAMR applied in Table 3.3 Depreciation. VicHub used the FAMR Asset descriptions, category and equipment register descriptions to map individual assets into specific categories.	N/A

<sup>2</sup> Labour cost element mapping was not overridden based on project descriptions and activity/service category code mapping.

### 3 — REVENUES AND EXPENSES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p>All depreciation expenses are recorded directly within the Pipeline and are not transferred from a related party entity and therefore are reported in the 'Amounts excluding related party transactions' column.</p> <p><u>Reconciling difference between Table 2.1 Depreciation with Table 3.3.1 Current year depreciation</u></p> <p>The AER template file includes a Summary worksheet with a reconciliation between Table 2.1 Depreciation with Table 3.3.1 Current year depreciation. Where there is a reconciling difference between the two tables it is attributable to disposals of assets in the current year resulting in a reversal of accumulated depreciation in the SAP ledger (Balance sheet entry only) reported only in Table 3.3.1 Current year depreciation. Table 2.1 is the relevant source to refer to for depreciation expense impacting the Profit and loss template in the current year.</p>	

## 4. REVENUE BY SERVICE

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 2.1.1: Revenue by service	2.1.1.a	Description, Reporting period - Amount excluding related party transactions, Reporting period - Related party transactions	Actual	PypIT and SAP	<p><u>Description</u> The 'description' categories are pre-populated by the AER for this template.</p> <p><u>Reporting period -Amount excluding related party transactions</u> Revenue by service is sourced from the Weighted Average Price (<b>WAP</b>) template where a revenue transaction report that discloses revenue by service types, was downloaded from the PypIT system for the reporting period. A Subject Matter Expert mapped the revenue service types against the relevant 'Service description' categories based on knowledge and the nature of the underlying revenue transactions. VicHub has included other service related revenue items that is sourced from PypIT.</p> <p><u>Reporting period -Related party transactions</u> VicHub did not have any revenue from its related parties.</p> <p><u>Other pipeline services (if relevant)</u> Includes:</p>	N/A

## 4 — REVENUE BY SERVICE

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<ul style="list-style-type: none"> <li>• Items that are miscellaneous in nature. VicHub collects such items using cost elements and projects; and</li> <li>• Exempt WAP services.</li> </ul>	

## 5. REVENUE – CONTRIBUTIONS

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 2.2.1: Customer contributions received	No BoP Reference cells in the template	N/A	Actual	SAP	No customer contributions revenue was received during the reporting period as such amounts would have been recorded against an appropriate cost element in VicHub's TB.	N/A
Table 2.2.2: Government contributions received	No BoP Reference cells in the template	N/A	Actual	SAP	No government contributions revenue was received during the reporting period as such amounts would have been recorded against an appropriate cost element in VicHub's TB.	N/A

## 6 — INDIRECT REVENUE

### 6. INDIRECT REVENUE

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 2.3.1: Indirect revenue allocation	N/A	N/A	Actual	SAP	No Indirect revenue was allocated to VicHub during the reporting period as such amounts would have been recorded against an appropriate cost element in VicHub's TB.	N/A

## 7. SHARED COSTS

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 2.4.1 Shared Cost Allocation	2.4.1.a	<p>Description categories, Shared costs excluding related parties, Shared costs paid to related parties (Gross shared costs), Percentage allocated to pipeline, Total allocated to pipeline excluding related parties, Total related party amounts allocated to pipeline (Net shared costs).</p>	Actual	SAP	<p>Shared Costs relate to enterprise support functions such as executive management, finance, legal, information technology (IT), human resources etc.</p> <p><u>Description categories</u></p> <p>The cost element description field from costs within SAP was used to map into the template's categories (e.g. 'wages', 'other direct costs', 'employee costs', 'indirect operating expenses', etc.).</p> <p>Project descriptions were also used as a basis to categorise costs into description categories (e.g. 'Information technology and communication costs').</p> <p>Where project descriptions and activity/service category codes supported classification within a more specific category then the cost element based mapping was overridden<sup>3</sup>. The following description categories were populated based on project description/activity code mapping:</p> <ul style="list-style-type: none"> <li>Information technology and communication costs</li> </ul>	N/A

<sup>3</sup> Labour cost element mapping was not overridden based on project descriptions and activity/service category code mapping.

## 7 — SHARED COSTS

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<ul style="list-style-type: none"> <li>Rental and leasing costs</li> </ul> <p><u>Related party and non-related party:</u></p> <ul style="list-style-type: none"> <li><u>Shared costs excluding related parties</u> Where project costs are collected directly to the pipeline and not through a related party entity they were reported in the 'Shared costs excluding related parties' column.</li> <li><u>Shared costs paid to related parties.</u> The gross shared costs paid to related parties e.g. Finance, Legal, Managing Director are the total shared costs incurred across the Jemena Group before allocating to specific assets (e.g. pipelines, distribution networks etc.). Gross shared costs are collected in SAP at the JAM entity. It is from this entity that the allocation of shared costs occur.</li> </ul> <p><u>% allocated to pipeline and total allocated to pipeline excluding related parties.</u></p> <p>The Jemena Group only allocates costs that are specifically attributable to VicHub as Shared costs such as insurance and external audit costs. The Jemena Group does not allocate any broader non-pipeline specific shared costs to VicHub as the underlying drivers for cost allocation to VicHub are negligible.</p>	

## 8. STATEMENT OF PIPELINE ASSETS

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 3.1: Pipeline assets	3.1.a	Initial construction or acquisition costs, Additions, Capitalised maintenance or improvements, Disposals or early termination (at cost), Depreciation.	Actual	Table 3.3.1: Fixed assets at cost - pipeline assets Table 3.3.2: Shared assets at cost (less straight line depreciation)	All items were populated based on Australian Energy Regulator ( <b>AER</b> ) designed formulas which referenced the supporting 'Table 3.3.1: Fixed assets at cost - pipeline assets' and 'Table 3.3.2: Shared assets at cost'.  <u>Non-core pipeline assets</u> No allocation of non-core pipeline assets has been included in Table 3.1 where there is a remote nexus with the pipeline activities such as treasury hedging financial instruments, defined benefit assets, minor assets sitting in JAM (receivables etc.), and other corporate assets etc.	N/A
Table 3.1: Pipeline assets	3.1.a.1	Other non-depreciable pipeline assets	Actual	SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill)  SAP	<u>Other non-depreciable pipeline assets - SGSPAA Group Consolidation support schedule</u> The SGSPAA Group consolidates its business combination adjustments at the SGSPAA level, meaning that it does not distribute any business combination adjustments to its subsidiary entities. The business combination adjustments are maintained in an excel spreadsheet. Business combination adjustments (original cost and accumulated depreciation) that relate to VicHub have been allocated to the categories in the template on the basis of fixed asset information contained in a	As there is no specific Goodwill category, EGP has included Goodwill in the 'Other non-depreciable pipeline assets' in the template.

## 8 — STATEMENT OF PIPELINE ASSETS

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p>Business combination uplift schedule and input from a subject matter expert who assisted in the categorisation of these adjustments into the template categories.</p> <p><u>Other non-depreciable pipeline assets – SAP TB</u></p> <p>Amounts have been extracted from VicHub’s Trial Balances for the reporting period and include GL accounts such as accrued receivables, inventories, deferred tax assets and amounts due from related parties.</p> <p>SAP has functionality that records and identifies any transactions from related parties to VicHub, known as trading partner. Related party loan accounts with each trading partner entity were aggregated, where the receivable amount was greater than the payable amount the net amount was reported in ‘Other non-depreciable pipeline assets’. Where the payable amount was greater than the receivable amount the balance was a net liability and therefore not included in ‘Other non-depreciable pipeline assets’ in the template. VicHub has a legally-enforceable right to set off the recognised amounts and VicHub intends either to settle on a net basis or realise the asset and settle the liability simultaneously.</p> <p>In accordance with accounting standards VicHub has netted off deferred tax assets and liabilities in its Balance Sheet.</p>	

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 3.1: Pipeline assets	3.1.b	Inventories, Deferred tax assets, Other assets	Actual	SAP	VicHub's Inventories, deferred tax assets and other assets are not shared assets, they form part of Pipeline Assets and are reported on the row 'Other non-depreciable pipeline assets'. (refer to BoP reference 3.1.a for further details).	N/A

## 9. ASSET USEFUL LIFE

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 3.1.1: Asset useful life	3.1.1.a	Description (list each individual balance sheet item), Acquisition date, Useful life years, Reason for choosing this useful life	Actual	Table 3.3.1: Pipeline assets at cost  Table 3.3.2: Shared assets at cost	<p><u>Description (list each individual balance sheet item)</u></p> <p>The 'Description' column was referenced from the 'Description' column as listed in:</p> <ul style="list-style-type: none"> <li>• Table 3.3.1: Pipeline assets at cost</li> <li>• Table 3.3.2: Shared assets at cost</li> </ul> <p><u>Acquisition date</u></p> <p>The assets in the FAMR sourced from SAP, have been aggregated into similar 'Description' items in Table 3.1.1. As there were numerous individual assets in the FAMR therefore the acquisition date is reported as 'various acquisition dates'.</p> <p><u>Useful life years</u></p> <p>A FAMR lists individual assets that contain the following information:</p> <ul style="list-style-type: none"> <li>• Asset description (text field)</li> <li>• Depreciation start date (date field)</li> <li>• Estimated useful life (years)</li> <li>• Original Cost (\$)</li> <li>• Acquisition (\$) (includes Transfers)</li> <li>• Disposals/retirements (\$)</li> <li>• Accumulated depreciation (\$)</li> <li>• Depreciation for the year (\$)</li> <li>• Depreciation retirements (\$)</li> </ul>	N/A

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<ul style="list-style-type: none"> <li>Closing book value (\$)</li> </ul> <p>The useful life for each category was calculated based on the calculated weighted average cost useful life formula below with the information sourced from FAMR.</p> <p>Weighted average cost useful life equals:</p> $\sum \frac{(Opening\ Cost + Aquisitions + Retirements)}{Total\ 'Description'\ Cost * Asset\ useful\ life}$ <p>Note that the Total Description Costs is the sum of Opening cost + Additions– Retirements.</p> <p><u>Reason for choosing this useful life</u></p> <p>The economic useful life of individual assets is defined in terms of the Australian Accounting Standards and the assets expected use to VicHub which may not fall within the Guideline’s Appendix A – Pipeline asset lives. The estimation of the economic useful life of an asset is a matter of judgement based on the Jemena Group’s experience with similar assets. Additionally, economic useful life shall be considered in relation to the life assigned to similar assets within the asset category.</p>	

## 10 — ASSET IMPAIRMENT

### 10. ASSET IMPAIRMENT

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 3.2.1: Assets impaired	BoP reference field not included in table	Asset description, Impairment amount \$ nominal, Impairment date, Basis for impairment	Actual	SAP	Management tested the VicHub Cash Generating Unit, including allocated goodwill for impairment as part of its usual annual impairment testing for December 2022 financial reporting purposes in accordance with Australian Accounting Standard requirements, with no impairment recognised. In assessing the position as at December 2022, management considered both external and internal indicators of impairment such as; changes in the regulatory environment, current and future performance, asset characteristics, physical damage, business environment and market conditions. No impairment was noted as part of testing indefinite life intangible assets therefore no impairment has been recognised for the year ended 31 December 2022.	N/A
Table 3.2.2: Asset impairment reversals	BoP reference field not included in table	Asset description, Prior Impairment amount \$ nominal, Impairment date, Basis for impairment, Reversal amount \$nominal, Reversal date, Basis for Reversal	Actual	SAP	No assets impairment reversals were recorded during the reporting period.	N/A

## 11. DEPRECIATION

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 3.3.1: Pipeline assets at cost - pipeline assets & Table 3.3.2: Shared assets at cost (less straight line depreciation)	3.3.1.a	Description, Category, Acquisition date, Useful life, Estimated residual value, Initial construction or acquisition cost, Additions, Capitalised Maintenance or improvements, Disposals or Early termination, Cost Base, Prior years' accumulated depreciation Current year depreciation, Written Down Value	Actual	SAP FAMR and equipment listing report  The SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill)	<p>The FAMR lists individual assets and was downloaded from SAP.</p> <p><u>Category</u> Each asset was mapped into the relevant categories provided in the AER template drop down list (e.g. Pipeline, Compressor, City Gates etc.) based on:</p> <ul style="list-style-type: none"> <li>analysis of the FAMR Asset description &amp; Asset class;</li> <li>input from engineers and subject matter experts; and</li> <li>where relevant, analysis of a separate corresponding equipment listing report which contains more detailed information than the FAMR.</li> </ul> <p>VicHub used subject matter experts to map its asset categories to that in the template as VicHub's SAP system was designed prior to the establishment of the GMR reporting regime.</p> <p><u>Description</u> The asset description was mapped to the categories in the template.</p> <p><u>Acquisition date</u> Refer to 'Acquisition date' explanation for Table 3.1.1 Asset useful life.</p> <p><u>Useful life</u></p>	N/A

## 11 — DEPRECIATION

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p>Refer to 'Useful life' explanation for Table 3.1.1 Asset useful life.</p> <p><u>Estimated residual value</u> VicHub has estimated there to be no residual value for all pipeline assets which is in accordance with its internal Property, Plant and Equipment policy and aligns with AASB 116 Property, Plant and Equipment which recognises that in practice, the residual value of an asset is often insignificant and therefore immaterial in the calculation of the depreciable amount (AASB 116(53)).</p> <p><u>Construction or acquisition cost</u> The 'Construction or acquisition cost' column value (\$) was populated for each 'Description' item based on the FAMR data which was aggregated because there were too many separate assets in the FAMR to report them separately in Table 3.3.1. The 'Original cost' of assets in the FAMR were aggregated based on asset 'Description' where the 'Depreciation start date' value was prior to the SGSPAA acquisition of the pipeline in August 2007. Fair value uplift adjustments has been applied to the applicable categories in the template.</p> <p>Prior year disposal removed from the 'Construction or acquisition cost' were added back to report a life to date 'Construction or acquisition cost' (refer to disposal explanation below for methodology explanation) prior to SGSPAA acquisition of the pipeline during August 2007.</p>	

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p><u>Additions</u></p> <p>The 'Additions' column was populated for each description item based on the FAMR data which was aggregated because there were too many separate assets in the FAMR to report them separately in Table 3.3.1. The 'Original cost' and the 'Acquisition' value of assets in the FAMR were aggregated based on asset 'Description' where the 'Depreciation start date' value was after SGSPAA's acquisition of the pipeline during August 2007.</p> <p>Prior year disposals removed from the original cost were added back to report a life to date original cost after SGSPAA's acquisition of the pipeline during August 2007.</p> <p><u>Capitalised Maintenance</u></p> <p>VicHub does not have any capitalised maintenance. Maintenance costs such as day to day servicing including labour, consumables and spare parts are excluded from measurement of an item of PPE in accordance with the SGSPAA Group's PPE policy and AASB 116 (12).</p> <p><u>Disposals</u></p> <p>VicHub did not have any asset disposals.</p> <p><u>Prior years' accumulated depreciation</u></p> <p>Sourced based on the aggregation of prior year GMR template's:</p> <ul style="list-style-type: none"> <li>• Prior years' accumulated depreciation</li> </ul>	

## 11 — DEPRECIATION

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<ul style="list-style-type: none"> <li>• Current year depreciation</li> </ul> <p><u>Current year depreciation</u></p> <p>The 'Current year depreciation' values in the FAMR were aggregated for each 'description' row and then populated in this column of the table. Accumulated fair value uplift depreciation has been applied to the applicable categories in the template.</p> <p>Reversal of accumulated depreciation in the FAMR (Balance sheet entry only) upon disposal of an asset was recorded in this column of the table.</p> <p><u>Written down value</u></p> <p>The 'Written down value' of all assets in table 3.3.1 was aggregated.</p>	

## 12. SHARED SUPPORTING ASSETS

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 3.4.1: Shared supporting asset allocation	3.4.1.a	Description (list each individual shared asset category greater than 5 percent), Category of shared assets, Total amount, Percentage allocated to pipeline, Total allocated to pipeline	Actual	SAP – FAMR	No Shared Assets are allocated to VicHub.	N/A

## 13 — RECOVERED CAPITAL METHOD - PIPELINE ASSETS

### 13. RECOVERED CAPITAL METHOD - PIPELINE ASSETS

Table Name	Base Information			Population Approach	Source	Methodology	Assumptions
	Asset Description	Year	Item & Basis of Preparation (BoP) Reference	Actual / Estimate <sup>4</sup>			
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2003 – 2022	Construction cost, Additions BoP Reference: 4.1.a	Actual	SAP FAMR: • Jemena VicHub Pipeline Pty Ltd (VicHub)	The assets were aggregated by year, based on the year within the field 'Capitalisation date'.  <u>Mid-point Net Capital Expenditure Gross Up</u> Capex additions and disposals for each year are escalated to a mid-year point to account for the return on capital for capital expenditure incurred during the year. <i>Mid Point Gross Capex</i> $= \text{Capex} \times (1 + \text{Rate of Return percentage})^{0.5}$ The Rate of Return percentage input calculation methodology is further explained below (refer to 'Rate of Return' item).	No material replacements or disposals over the life of the pipeline.  Pipelines are a stable asset and it is reasonable to expect that there would be minimal disposals.
Table 4.1: Recovered capital method -	Pipeline Assets	2003 – 2022	Negative residual value BoP Reference: 4.1.b	Estimate	EGP Expert Engineering Report date updated for VicHub data	Negative residual value is calculated as:  $PV(\text{Decommissioning})_t = C_{TE} \times \frac{(1+i)^{T_D-T_E}}{(1+r)^{T_D-t}}$	Negative residual value is interpreted as the present value of the forecast decommissioning cost that

<sup>4</sup> For all Estimates, refer to the following table explaining why estimates were required, steps taken to locate actual information, the basis for the estimate and why the estimate represents the best estimate possible and has been arrived at on a reasonable basis.

Table Name	Base Information			Population Approach	Source	Methodology	Assumptions
	Asset Description	Year	Item & Basis of Preparation (BoP) Reference	Actual / Estimate <sup>4</sup>			
pipeline assets					<p><u>Inflation rate:</u> SGSPAA internal 2022 budgeted CPI</p> <p><u>Discount rate:</u> 5 year average rate for 15 year Australian Government Securities (AGS) bonds</p>	<p>Where:</p> <ul style="list-style-type: none"> <li>• <math>C_{T_E}</math> is the estimated cost of decommissioning in dollars as at time <math>T_E</math></li> <li>• <math>T_D</math> is the expected year of decommissioning</li> <li>• <math>i</math> is the estimated inflation rate</li> <li>• <math>r</math> is the estimated discount rate</li> <li>• <math>t</math> is the year of the estimate</li> </ul> <p>A Subject Matter Expert utilised the EGP expert Engineering report as a basis for estimating the decommissioning cost (<math>C_{T_E}</math>) for VicHub.</p> <p><u>Phasing of Negative Residual value</u> The year 1 value of the decommissioning cost was reported in year 1. The cost of debt incremental was then reported for each subsequent year until 2020. From 2021 onwards, each year's increment negative residual value is calculated as the movement in total negative residual value between that year and the prior year.</p>	<p>the service provider will pay when the pipeline is removed from service in the future.</p> <p>The expert engineering report is an accurate basis for estimating the cost to decommission the pipeline.</p> <p>The 5 year average of the 15 year AGS bonds are appropriate to estimate rate of return for present value calculation purposes.</p>
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2003 - 2004	Maintenance capitalised BoP Reference: 4.1.c	Estimate	Pipeline Asset – Maintenance capitalised (2005 – 2022)	<p>Data for capitalised maintenance was not available prior to the service providers ownership of the pipeline.</p> <p>Estimate pre-acquisition maintenance capitalised based on post-acquisition actual maintenance capitalised data, therefore estimated no capitalised maintenance.</p>	<p>Post-acquisition actual maintenance capitalised data is an appropriate basis for estimating pre-acquisition maintenance.</p> <p>No transactions recorded pre-acquisition for Maintenance capitalised.</p>

## 13 — RECOVERED CAPITAL METHOD - PIPELINE ASSETS

					<p><i>input source:</i> Credit Suisse Global Investment Returns Yearbook, prepared by Dimson, Marsh and Staunton (2017 edition)</p>	<p>government securities (AGS);</p> <ul style="list-style-type: none"> <li>• a constant MRP of 6.6 percent over the life of the pipeline; and</li> <li>• an equity beta ranging from 0.70 to 0.94 over the period (expressed at a gearing of 50 percent – reflecting regulatory precedent as applied by the ACCC and the AER for gas transmission equity betas, plus a positive adjustment to account for the additional risks associated with operating an unregulated gas transmission business such as VicHub and increased technology risks associated with government's climate change and emission policies).</li> </ul> <p><u>Notes:</u> Equity raising costs (i.e. the upfront expenses business may incur when issuing new capital) are assumed to be equal to zero, which is a conservative assumption. MRP</p>
--	--	--	--	--	---	---

Table Name	Base Information			Population Approach	Source	Methodology	Assumptions
	Asset Description	Year	Item & Basis of Preparation (BoP) Reference	Actual / Estimate <sup>4</sup>			
							<p>The Credit Suisse Global Investment Returns Yearbook, prepared by Dimson, Marsh and Staunton, is a well-accepted source of estimates for average excess returns. The 2017 edition of the yearbook estimates the arithmetic average premium of Australian equities over Australian government bonds to be 6.6 percent over the period from 1990 to 2016.<sup>6</sup> Importantly, this estimate includes only the returns from dividends and capital gains, and is not grossed up for the value of imputation credits. This estimate is therefore consistent with a value for gamma of zero.</p> <p>MRP of 6.6 percent represents our best estimate of a historical average of excess market returns, consistent with valuing imputation credits at zero.</p>

### **Explanation for Estimated Amounts**

For estimated amounts, in accordance with the Guideline Section 7 Basis of preparation, the following table explains:

- why it was not possible for the service provider to provide actual information;
- what steps the service provider took to locate actual information;
- if an estimate has been provided, the basis for the estimate, including the methods, assumptions and inputs used
- why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.

## 13 — RECOVERED CAPITAL METHOD - PIPELINE ASSETS

### ESTIMATED INFORMATION

Table Name	Base Information			Population Approach	Why it was not possible for the SGSPAA to provide actual information	Steps SGSPAA took to locate actual information;	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Asset Description	Year	Item	Actual / Estimate				
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2003 – 2022	Negative residual value	Estimate	<p>Cost have not yet been incurred to decommission the pipeline, therefore an estimate is inherently required to measure future costs.</p> <p>Further, the actual timing of decommissioning the pipeline is also uncertain, therefore increasing the level of estimation required.</p> <p>In addition, the CPI escalation factor and the discount rate inputs are estimates used to inflate for forecast future price increases and then discount to the present value respectively.</p>	No steps taken as actual information does not exist	The EGP engineering estimate was updated with VicHub data replacing the EGP data as a basis to estimate the cost of decommission the pipeline.	<p>The estimate is a best estimate because it has been calculated based on the following inputs which are sourced based on best available information:</p> <ul style="list-style-type: none"> <li>• Independent technical engineering estimate for EGP adapted to estimate the VicHub pipeline.</li> <li>• Discount rate: 5 year average for the 15 year Australian Government Securities (AGS) bond rate.</li> <li>• CPI escalation: SGSPAA internal CPI estimate (reasonable when compared with Australian Bureau of Statistics (ABS) rate).</li> <li>• Estimated year of decommissioning the pipeline.</li> </ul>

Table Name	Base Information			Population Approach	Why it was not possible for the SGSPAA to provide actual information	Steps SGSPAA took to locate actual information;	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Asset Description	Year	Item	Actual / Estimate				
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets, Shared Assets	2003 – 2004	<ul style="list-style-type: none"> <li>• Pipeline Assets:                             <ul style="list-style-type: none"> <li>– Maintenance capitalised</li> </ul> </li> <li>• Shared Assets:                             <ul style="list-style-type: none"> <li>– Construction cost or acquisition cost (where allowed) apportioned,</li> <li>– Maintenance capitalised ,</li> <li>– Disposal (at cost)</li> </ul> </li> </ul>	Estimate	Data for these items was not available prior to the service providers ownership of the pipeline.	Information requests were sent to previous owners but no response was received.	<p>No transactions for these items were noted over the SGSPAA ownership period.</p> <p>Estimated that there were no transactions for these items in the pre-acquisition period based on the assumption that the data would be consistent.</p>	Data from the post-acquisition period is actual data. This actual data represents the best source for arriving at a best estimate.
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2003 – 2006	Disposals (at cost)	Estimate	SAP FAMR and general ledger transactional data was not available prior to the SGSPAA ownership period.	Information requests were sent to previous owners but no response was received.	<p>Analysis of SAP FAMR reports for each year since 2007 did not identify a significant level of disposals. Therefore it is unlikely that there would be a material level of proceeds on disposal to use as an input. The SAP FAMR does not report on proceeds on disposals but it can be used as a reference point to assess the level</p>	Data from the SGSPAA ownership period is actual data. This actual data represents the best source for arriving at a best estimate.

## 13 — RECOVERED CAPITAL METHOD - PIPELINE ASSETS

Table Name	Base Information			Population Approach	Why it was not possible for the SGSPAA to provide actual information	Steps SGSPAA took to locate actual information;	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Asset Description	Year	Item	Actual / Estimate				
							of disposals.  Pipelines are a stable asset and it is reasonable to expect that there would be low levels of asset disposals and therefore proceeds on disposals of pipeline assets would be immaterial.	
Table 4.1: Recovered capital method - pipeline assets	Return of capital	2004	Revenue, Operating Expenditure	Estimate	The 2004 period is prior to the service provider's acquisition of the pipeline therefore the service provider does not have the relevant data.	Information requests were sent to previous owners but no response was received.	Actual 2005 data was used as a basis to estimate 2004 revenue and operating expenses. The 2005 amounts were adjusted for inflation using Australian Bureau of Statics CPI rates to estimate 2004 revenue and operating expenses.  The operations of the pipeline would be stable over the missing data	Actual 2005 data before the missing data period is the best data source to use as an input for estimating 2004 revenue and operating expenses because it is reasonable to expect that the operations of the pipeline would not change significantly year on year.

## RECOVERED CAPITAL METHOD - PIPELINE ASSETS — 13

	Asset Description	Year	Item	Actual / Estimate				
							period.  The only revenue of the entity was pipeline revenue.	
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2010 - 2018	Operating expenses	Estimate relating to VicHub costs recorded within EGP	Maintenance operating expenses were undertaken on behalf of VicHub by the EGP over the period from 2010 to 2018, inclusive.  Records were not retained to enable the VicHub component to be measured.	Reviewed internal records and concluded that data does not exist to enable the VicHub component to be measured, therefore no further steps were taken to locate actual information.	The maintenance operating expenditure was estimated based on an engineering experts cost build-up of the standard maintenance activities and costs incurred each year for VicHub.	This represents a best estimate because it is built-up based on an asset specific information and understanding i.e. an engineering experts understanding of the standard maintenance activities and costs incurred each year for VicHub.
Table 4.1: Recovered capital method - pipeline assets	Return of capital	1990 – 2022	Net tax liabilities	Estimate	VicHub is part of a consolidated tax group and does not pay corporate tax as a stand-alone entity. Therefore the net tax liability needs to be estimated.  Actual total asset data was not available for each	No steps taken as actual information does not exist for net tax liabilities.  Actual total asset data was not available for each of the pipelines EGP, QGP and VicHub from 2008 to 2011.	Estimated based on calculation Profit/(Loss) before tax.  Less Tax Depreciation  Less notional interest  Multiplied by the corporate tax rate (30	The estimate represents a best estimate because wherever possible an actual reference data point has been used as a basis to calculate the estimate  Accounting profit is the best approach for calculating the cash flows each year and therefore is the most appropriate input into

## 13 — RECOVERED CAPITAL METHOD - PIPELINE ASSETS

Table Name	Base Information			Population Approach	Why it was not possible for the SGSPAA to provide actual information	Steps SGSPAA took to locate actual information;	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Asset Description	Year	Item	Actual / Estimate				
					of the pipelines EGP, QGP and VicHub from 2008 to 2011. Therefore total assets could not be used as a basis to allocate interest costs across the pipelines.	Therefore no steps were taken to locate actual information.	percent).  The accounting profit and loss has been reviewed to identify material non-cash items that may require adjustment when estimating the net tax liability cash flow  The aggregate 2012 and 2013 percentage split of interest expense between EGP, Vic Hub and QGP was used to allocate total pipeline interest between pipelines for the period 2008 – 2011.	the net tax liability calculation.  Accounting profit has been sourced from actual historic records and therefore has been arrived at on a reasonable basis.  The 2012 to 2013 interest split percentages between EGP, QGP and VicHub was the best estimate for the years 2008 to 2011 because it is the closest time periods where actual data was available. Further the average pipeline interest for the 2012 & 2013 period most closely aligned with the average pipeline interest for the 2008 to 2011 period.
Table 4.1: Recovered capital method - pipeline assets	Return of capital	1989 – 2022	Rate of return	Estimate	The Guideline advises that the rate of return should be determined each year and should be commensurate with the prevailing conditions in the market for funds and	Actual information does not exist for the rate of return.  SGSPAA estimated the rate of return as a	Refer to Table 4.1: Recovered capital method - pipeline assets -rate of return explanation above.	Using a WACC as an estimate for rate of return is an accepted methodology adopted by the AER and therefore represents

Table Name	Base Information			Population Approach	Why it was not possible for the SGSPAA to provide actual information	Steps SGSPAA took to locate actual information;	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Asset Description	Year	Item	Actual / Estimate				
					<p>reflect the risk the service provider face in providing pipeline services.</p> <p>The Guideline Explanatory Statement (pg. 25) advises with regard to the 'Commercial rate of return' that 'Service provides will be able to determine how this input is estimated'. Usage of the term 'estimated' in the Guideline Explanatory Statement implies that SGSPAA is required to estimate this data input.</p>	<p>WACC and sourced actual data to input into the WACC calculation.</p> <p>The rate of return is a theoretical concept and does not reference VicHub costs, rather it references regulatory decisions that have been applied to the relevant time period.</p>		<p>the best estimate possible.</p> <p>The data inputs into the WACC have been sourced from published AER accepted sources and therefore is a best estimate which has been arrived at on a reasonable basis.</p>

### 14. PIPELINE DETAILS

Table Name	Item	Actual / Estimate	Source	Methodology	Assumptions
Table 4.2: Pipeline details	Construction date	Actual	SAP FAMR	Extracted the year of construction from the FAMR for the construction assets.	Construction date is interpreted as the mid-point of the year when construction commenced based on reference to the FAMR.
Table 4.2: Pipeline details	Negative residual value	Estimate	Refer to 'Table 4.1: Recovered capital method - pipeline assets' source.	Refer to 'Table 4.1: Recovered capital method - pipeline assets' methodology explanation.	Refer to 'Table 4.1: Recovered capital method - pipeline assets' assumptions.

## 15. CAPITAL EXPENDITURE

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 4.1.1: Capital expenditure greater than 5 percent of construction cost	4.1.1.a	Description of works, Date recognised, Expenditure (\$ nominal)	Actual	SAP (Referencing the RCM template)	VicHub analysed the underpinning data for the RCM template and with a view to identifying any projects where capex is greater than 5% of the construction cost. VicHub did not have any capex that met the criteria of the template.	VicHub has interpreted that the capex required in the template is for the life to date basis for the pipeline.

## 16. WEIGHTED AVERAGE PRICES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 5.1 Weighted average prices	5.1.a	Volume Weighted average prices	Estimate	<p>The PypIT system is the billing/invoicing system in place which provides the detailed breakdown of volumes and revenue data by service type and shipper as well as the corresponding contract information. Hence, this is the best source to provide data for the purposes of calculating the weighted average price since it is the only system that captures information related to revenue, volume and category breakdown and details in the same place.</p>	<p>Data extracted from PypIT is compared and checked against SAP balances and reference tariffs before being categorised accordingly based on service type per details below. Where necessary data has been manually categorised as follows:</p> <p><b><u>Categorisation of Charge Method</u></b></p> <p>The “Postage Stamp Transportation Services” represents revenue and volumes associated with Firm Injection, and As Available Withdrawal services. Per Section 5 of the Guideline, these services are where the same charge is payable along the length of the pipeline, irrespective of the distance transported. Firm services are charged on a capacity basis i.e. Maximum Daily Quantity (<b>MDQ</b>), while As Available services are charged on a volumetric basis (i.e. actual deliveries).</p> <p>Actual revenue for each transportation service is captured separately in pypIT, therefore estimates are not required to allocate revenue to each transportation service.</p> <p><b><u>Volume Calculation</u></b></p> <p>The volume used in the weighted average price calculation is based on the service type. For example, Firm Services, volumes are based on MDQ. To obtain the total relevant volumes for a particular month, the MDQ needs to be multiplied</p>	<p>Some specific charges / services are not relevant to the weighted average price calculation (i.e. not part of the service categories required under the weighted average price template as specified in Section 5 of the Guideline. This is discussed further below.</p> <p>In determining the total revenue to be used in calculating the weighted average price, there are certain service types which fall under "Other pipeline services (if relevant)" in Table 2.1.1 that should be omitted from the weighted average price calculation as it does not form part of the main pipeline revenue generating services. This includes:</p>

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
					<p>out by the number of days in the month. For As Available Services, the actual delivery volumes would apply.</p> <p>Volume data have been estimated for each service and charge reported in the template by adjusting raw data obtained from the PypIT reports. Manual calculations have been performed to calculate the relevant volumes to be included in the WAP calculations.</p>	<ul style="list-style-type: none"> <li>- Minimum Monthly Service Charge</li> <li>- Odourisation Charge</li> <li>- Authorised Overrun Charge</li> <li>- Unauthorised Overrun Charge</li> </ul> <p>The invoice data in PypIT reflects actual invoicing and has been used as the basis of allocation. Based on the invoice data retrieved from PypIT, the revenue and volume data used in the weighted average price calculation is included/excluded based on the revenue charge type and service type categorisation.</p> <p>The MDQ used in the calculation (as referred to in the methodology) is the applicable MDQ on the last day of the month. The volume calculated is therefore only an estimated</p>

## 16 — WEIGHTED AVERAGE PRICES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
						<p>volume because there are instances where MDQ in the month is not constant on all days.</p> <p>For services where calculated volumes are materially different from the total invoiced volumes (typically where there have been curtailments or large MDQ changes), the invoiced volumes have been used.</p>
Table 5.1 Weighted average prices	5.1.b	Revenue Weighted average prices	Actual	PypIT	<p>Categorisation of data per above Volume Methodology</p> <p><b><u>Revenue Calculation</u></b></p> <p>The revenue obtained in the report to be used in the weighted average price calculation is based on the sum of the relevant charges per the assumptions listed out in this paper. The relevant charges are added together to come to an adjusted revenue figure before it is used in the final weighted average price calculation.</p> <p><b><u>Weighted Average Price Calculation</u></b></p> <p>The final weighted average price calculation is based on the revenue calculated divided by volume calculated per above in line with section 5.1.2 of the Guideline.</p>	<p>As per above assumption, using the invoice data retrieved from PypIT, the revenue and volume data used in the weighted average price calculation is included/excluded based on the revenue charge type and service type categorisation.</p> <p>For services with minimum monthly charges (typically for services charged on a throughput basis), the charges associated with actual usage have been</p>

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
						extracted from the minimum service charge and included in the revenue for the weighted average price calculation.

## 17 — EXEMPT WAP SERVICES

### 17. EXEMPT WAP SERVICES

Table Name	Base Information		Population Approach	Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate			
Table 5.1.1 AER Exemptions	No BoP Reference cells in the template	AER exemptions	Actual	PypIT System as per description in Table 5.1	Based on a report generated by PypIT, the number of customers by service type by pipeline can be determined. Based on this information, no service types by zone that have no more than 2 shippers who have used this service during the year were identified, therefore there were no applications to the AER for exemptions in accordance with section 5.3 of the Guideline.	N/A

## 18. ESTIMATED INFORMATION

Table Name	Base Information		Population Approach	Source	Why it was not possible for the Jemena Group to provide actual information	Steps Jemena Group took to locate actual information	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Reference	Item	Actual / Estimate					
Table 5.1 Weighted average prices	5.1.a	Volume	Estimate	As Above	This is due to the system limitations of PypIT as it was not built for this reporting purpose.	Jemena Group is currently working towards developing a PypIT report that captures the relevant data for the WAP calculation. A planned completion date for these software changes has not been finalised.	PypIT contains contract details (MDQ, tariff and terms), nominations, invoice amounts, pipeline schedules and actual deliveries for all our shippers and services. Currently there is no report in place in PypIT that provides the data in a way to be used to calculate the WAP. VicHub is required to manually extract the relevant information to be used in the calculations and include/exclude components in the calculations based on the assumptions	This is the best estimate given the information available from PypIT. We are not aware of any alternative information available to us at this time.

## 18 — ESTIMATED INFORMATION

Table Name	Base Information		Population Approach	Source	Why it was not possible for the Jemena Group to provide actual information	Steps Jemena Group took to locate actual information	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
	Reference	Item	Actual / Estimate					
							<p>associated with Table 5.1.</p> <p>Due to the recategorisation / split out of the raw data from the report and the calculation of the weighted average prices based on these manually adjusted figures, the data disclosed are only estimates.</p>
