

## Independent Auditor's Review Report

#### To the Directors of the Darling Downs Pipeline Service Providers

Report on the review of the Financial Information within the Financial Reporting Guideline for Non-Scheme Pipeline Templates

#### Conclusion

We have reviewed the financial information in Tables 4.1, 4.2, 4.1.1, 5.1 and 5.1.1 of the Financial Reporting Guideline for Non-scheme Pipeline Templates (Financial Information) of the Darling Downs Pipeline Service Providers (Service Providers).

The Darling Downs Pipeline Service Providers comprises the following entities:

- Jemena Darling Downs Pipeline (1) Pty Ltd
- Jemena Darling Downs Pipeline (2) Pty Ltd
- Jemena Darling Downs Pipeline (3) Pty Ltd

Based on our review, which is not an audit, nothing has come to our attention that causes us to believe that the Financial Information within the Financial Reporting Guideline for Non-scheme Pipeline Templates for the year ended 31 December 2022 is not prepared, in all material respects, in accordance with the Financial Reporting Guideline for Non-Scheme Pipelines (Guideline) issued by the Australian Energy Regulator (AER) on 19 December 2017 and the Basis of Preparation as prescribed by the Guideline.

#### Emphasis of matter - basis of preparation and restriction on use

The Financial Information has been prepared in accordance with the Basis of Preparation as prescribed by the Guideline and has been prepared by the Directors of the Service Providers to meet their reporting requirements under the Guideline. As a result, the Financial Information and this Auditor's Review Report may not be suitable for another purpose. Our conclusion is not modified in respect of this matter.

Our report is intended solely for the Directors of the Service Providers and should not be used by parties other than the Directors of the Service Providers. We disclaim any assumption of responsibility for any reliance on this report, or on the Financial Information to which it relates, to any person other than the Directors of the Service Providers, or for any other purpose than that for which it was prepared.

#### **Other Information**

Other Information is financial and non-financial information in the Service Providers' annual regulatory reporting which is provided in addition to the Financial Information, the Basis of Preparation and the Auditor's Review Report. The Directors are responsible for the Other Information.

Our review conclusion on the Financial Information does not cover the Other Information and, accordingly, we do not express any form of assurance conclusion thereon.

In connection with our review, which is not an audit, of the Financial Information, our responsibility is to read the Other Information. In doing so, we consider whether the Other Information is materially inconsistent with the Financial Information or our knowledge obtained in the review engagement, or otherwise appears to be materially misstated.

We are required to report if we conclude that there is a material misstatement of this Other Information, and based on the work we have performed on the Other Information that we obtained prior to the date of this Auditor's Review Report we have nothing to report.

#### Matters relating to the electronic publication of the reviewed Financial Information

This Auditor's Review Report relates to the Financial Information of the Service Providers for the year ended 31 December 2022 included on the Jemena website. The Directors of the Service Providers are responsible for the integrity of the Jemena website. We have not been engaged to report on the integrity of the Jemena website. The Auditor's Review Report refers only to the subject matter described above. It does not provide a conclusion or opinion on any other information which may have been hyperlinked to/from the Financial Information.

#### Responsibilities of the Directors and Management for the Financial Information

Management of the Service Providers is responsible for:

- the preparation of the Financial Information in accordance with the requirements of the Guideline and the Basis of Preparation; and
- implementing necessary internal control to enable the preparation of the Financial Information that is free from material misstatement, whether due to fraud or error.

The Directors of the Service Providers are responsible for:

- overseeing the Service Providers' regulatory reporting process; and
- determining that the Basis of Preparation is appropriate to meet the needs of the AER in order to fulfil the Service Providers' reporting obligations.

#### Auditor's responsibilities for the review of the Financial Information

Our responsibility is to express a conclusion on the Financial Information in order to state whether, on the basis of the procedures described below, we have become aware of any matter that makes us believe that the Financial Information is materially misstated and does not comply with the requirements of the Guideline.

We conducted our review of the Financial Information in accordance with the Australian Standard on Review Engagements ASRE 2405 Review of Historical Information Other than a Financial Report.

A review of the Financial Information consists of:

- Making enquiries with the persons responsible for financial, accounting and regulatory reporting matters to understand the internal controls, governance structure and reporting process of the Financial Information;
- Applying analytical procedures over the Financial Information; and
- Other review procedures including:
  - performing walkthroughs to understand the process for compiling the Financial Information with reference to the service provider's source documentation;
  - evaluating the appropriateness of the Basis of Preparation with respect to the Financial Information; and
  - reviewing the Financial Information in its entirety to ensure it is consistent with our overall knowledge of our review engagement.

A review is substantially less in scope than an audit conducted in accordance with *Australian Auditing Standards* and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit or reasonable assurance opinion.

#### Independence and quality control

As required by ASRE 2405, we have complied with our independence and other relevant ethical requirements of the *Code of Ethics for Professional Accountants* (including Independence Standards) issued by the *Accounting Professional and Ethical Standards Board*, and complied with the applicable requirements of *Australian Standard on Quality Control 1* to maintain a comprehensive system of quality control.

#### Inherent limitations

Because of the inherent limitations of an assurance engagement, together with the internal control structure it is possible that fraud or error may occur and not be detected. A limited assurance engagement as at specified date does not provide assurance on whether compliance with the Guideline will continue in the future.

#### **OVERVIEW**

The Australian Energy Regulator (**AER**) issued a non-scheme pipeline financial reporting guideline (**the Guideline**) in December 2017 under Part 23 of the National Gas Rules (**NGR**). This Guideline requires service providers of such pipelines to publish certain financial information about those pipelines.

Due to the operation of National Gas Rules Schedule 6 Rule 22, this Guideline applies to the Darling Downs Pipeline (**DDP**) for the reporting period 1 January to 31 December 2022.

To apply the Guideline we have adopted the following general interpretations:

- All Jemena Group<sup>1</sup> legal entities that have a controlling interest in DDP are 'service providers' and so all costs incurred, revenue
  earned or assets owned by those entities that relate to the pipeline should be captured and consolidated in the Gas Market Reform
  (GMR) financial reporting templates.
- Similarly, because SGSPAA is the parent company of the Jemena Group, acquisition costs and associated dates (mainly in the Recovered Capital Method (RCM) template) are determined by reference to that entity for the purposes of complying with the Guideline. This means for instance that the acquisition of the DDP occurred on 6 June 2017 when the Jemena Group acquired the pipeline from Origin.
- Although the DDP consists of three pipeline licences covering different sections of the pipeline that were constructed at different
  times, together these form a single transmission pipeline for the purposes of complying with the Guideline and so costs, revenues
  and asset values are consolidated across those three licences.
- Actual information includes information calculated directly from information contained in Jemena Group's systems and other records
  without material judgement required. Estimated information is anything other than actual information.
- To meet the requirements of the Guideline when compiling the RCM valuation (section 4.1), DDP undertook all reasonable steps to obtain historical information where this was not already available to the Jemena Group. These steps are further explained in the RCM section (section 13) of this basis of preparation.
- All 'Previous reporting period' amounts have been sourced from the prior year published GMR financial reporting templates (refer to Tables: 2.1, 2.1.1, 3.1, 3.3).
- Jemena Group costs are direct or indirect in nature. Direct costs, such as maintenance, program management, engineering support are directly allocated to specific assets within the Jemena Group. Jemena Group shared or indirect costs such as IT, finance, legal, people, safety and environment are allocated to specific assets within the Jemena Group in accordance with the principles of the Jemena Group Cost Allocation Methodology procedure. These principles are further explained in the Revenue and Expenses section (section 3) of this Basis of Preparation.
- From 2019 DDP includes lateral and production facility assets which are not included in the DDP regulatory registration. The lateral has a separate regulatory registration for the purposes of Part 23 of the NGR and the production facility is an upstream asset and is therefore excluded from the definition of a pipeline for the purposes of the NGR. Revenues and costs attributable to assets not included in the DDP regulatory registration have been excluded from the DDP financial reporting templates with supporting BoP explanations of the approach adopted (non-DDP).

The Jemena Group includes SGSP (Australia) Assets Pty Ltd (SGSPAA) and its subsidiaries excluding Zinfra Pty Ltd and its subsidiaries. Jemena Group costs may include charges from Zinfra Pty Ltd and its subsidiaries where they relate to the pipeline.

### **OVERVIEW**

The rest of this basis of preparation document explains how we have populated each of the templates required by the Guideline, including by identifying where estimated data was used when actual data was not available.

As per the Jemena Group access user guide, Jemena Darling Downs Pipeline (1) Pty Ltd, Jemena Darling Downs Pipeline (2) Pty Ltd and Jemena Darling Downs Pipeline (3) Pty Ltd are the service providers for DDP, being the licensed operators. The other service providers in the Jemena Group have appointed Jemena Darling Downs Pipeline (1) Pty Ltd, Jemena Darling Downs Pipeline (2) Pty Ltd and Jemena Darling Downs Pipeline (3) Pty Ltd as the responsible service provider for the purposes of publishing the financial information.

| Name                      | Reference                           | Item                              | Actual /<br>Estimate   | Course   | incurodology  | Assumptions |
| Table<br>1.1.1:<br>Return | No BoP<br>Reference<br>cells in the | Earnings before interest and tax, | Actual                 | N/A – Populated based on formulas referencing supporting schedules.  | All categories in this template are based on the AER's designed formulae that references the supporting tables within the workbook. | N/A         |
| on assets                 | template                            | Total assets,                     |                        |  | Earnings before interest and tax  |             |
|                           |                                     |                                   |                        | References earnings before interest and tax ( <b>EBIT</b> ) in 'Table 2.1: Statement of pipeline revenues and expenses'. |   |             |
|                           |                                     |                                   |                        |  | Total assets  References total assets in 'Table 3.1: Pipeline assets'.  Return on assets  |             |
|                           |                                     |                                   |                        |  | Calculated as: Earnings before interest and tax divided by Total Assets.  |             |

## 3. REVENUES AND EXPENSES

| Table  | Base      | Information                      | Population<br>Approach  | Source  | Methodology  | Assumptions |
|--|-----------|----------------------------------|---|---|--|-------------|
| Name   | Reference | ltem                             | Actual /<br>Estimate  | Source  | Metriodology   | Assumptions |
| Table 2.1<br>Statement<br>of pipeline<br>revenues<br>and<br>expenses | 2.1.a     | (exco<br>estin<br>reve<br>attrib | Actual (except for estimate of revenue attributable to Atlas) | Populated based on formulas referencing supporting schedules. | Total service revenue References 'Total service revenue' in 'Table 2.1.1 Revenue by service'.  Customer Contributions Revenue References 'Total' in 'Table 2.2.1: Customer contributions received'.  Government Contributions Revenue References 'Total' in 'Table 2.2.2: Government | N/A         |
|  |           |                                  |   | SAP   | contributions received'.  Profit from sale of fixed assets  DDP captures such amounts in its accounting systems and was sourced from the DGP's Trial Balance (TB).   |             |
|  |           |                                  |   | SAP   | Other direct revenue Includes:  • Items that are not pipeline service related. DDP collects such items using cost elements and projects.  Other revenue  |             |

| Table  | Base      | Information   | Population<br>Approach              | Source              | Methodology  |  |
|--|-----------|---|-------------------------------------|---------------------|--|--|
| Name   | Reference | Item  | Actual /<br>Estimate                | Source              | metriodology   | Assumptions  |
|  |           |   |                                     |                     | References the 'Total' in 'Table 2.3.1: Indirect revenue allocation'.  Non-DDP revenue  Refer to BoP Reference 2.1.1.a for the explanation of the methodology applied to remove Non-DDP revenue from Firm forward haul transportation services (part of Total service revenue).  |  |
| Table 2.1<br>Statement<br>of pipeline<br>revenues<br>and<br>expenses | 2.1.b     | Direct Costs, Shared Costs, Earnings before interest and tax (EBIT) | Estimate<br>(Non-DDP<br>allocation) | ERP System<br>(SAP) | Most of the entities within SGSPAA and its controlled entities use an Enterprise Resource Planning (ERP) system known as SAP to collect costs. DDP as part of the Jemena Group, uses SAP to record its financial transactions. Costs are collected in planned maintenance orders (PMO) that cascade up to projects (WBS elements) in SAP based on the activity, on which an employee works or where an external supplier provides goods/services.  A reporting tool (BI) is used to download the operating expenditure costs from SAP. The data is aggregated by WBS element and general ledger account code (cost element) and mapped into the relevant cost category of the template.  Related party and non-related party The majority of costs that DDP incurs are sourced from a related entity, Jemena Asset Management Pty Ltd (JAM), which is part of the Jemena Group. JAM records costs that are attributable to DDP and uses SAP functionality to | Estimates applied are an appropriate basis to calculate DDP Costs:  • Management expert estimate of the non-DDP routine maintenance costs based on technical understanding and experience of the routine maintenance requirements for the key components making up the Atlas asset is an appropriate basis to estimate (estimate) • Non-Maintenance costs calculated as non-DDP revenue as a percentage of total revenue multiplied by the remaining DDP non-maintenance opex stack. |

| Table |           |      | Base Information Approach Source |        | Mathadalagu  | Assumptions |
|-------|-----------|------|----------------------------------|--------|--|-------------|
| Name  | Reference | ltem | Actual /<br>Estimate             | Source | Methodology  | Assumptions |
|       |           |      |                                  |        | transfer such costs at zero margin to DDP. These costs are reported in the 'related party transactions' column. Where project costs are collected directly to the pipeline and not through a related party entity they were reported in the 'amounts excluding related party transactions' column.   |             |
|       |           |      |                                  |        | Direct costs and Shared costs  Direct and shared cost classification is based upon the activity/service category codes included as part of the WBS element structure for each project. An activity/service mapping table is used to map activities into relevant cost categories:  |             |
|       |           |      |                                  |        | <ul> <li>Direct Costs: Asset Management (Asset: Strategy,<br/>Planning, Investment, Information and Management<br/>system activities), Service Delivery (Construction &amp;<br/>Supply Chain, Maintenance &amp; Faults, Network Control<br/>&amp; Emergency Maintenance, Metering, Customer<br/>Service), Customer and Markets (Commercial<br/>Management).</li> </ul> |             |
|       |           |      |                                  |        | Shared Costs: Enterprise Support Functions<br>(executive management, finance, legal, human<br>resources, information technology (IT) etc.). <i>Note</i> :<br>Shared costs flow into Table 2.1 from Table 2.4 1<br>Shared cost allocation.  |             |

| Table | Base II   | nformation | Population<br>Approach | Source | Mathadalami   | Assumptions |
|-------|-----------|------------|------------------------|--------|---|-------------|
| Name  | Reference | Item       | Actual /<br>Estimate   |        | Methodology   | Assumptions |
|       |           |            | Estimate               |        | Corporate property costs have similarly been allocated between direct and shared costs based on property usage by function  Mapping into the template categories The cost element description field from costs within DDP was used to map into the template's categories (e.g. 'wages', 'other direct costs', 'employee costs', 'indirect operating expenses', etc.). DDP has interpreted direct wages as the payroll costs assigned to staff who directly work on the pipeline. DDP's shared employee costs are the allocated payroll costs of administration type staff such as finance, legal, people, safety and environment.  Where project descriptions and activity/service category codes support classification within a more specific category then the cost element based mapping was overridden <sup>2</sup> . The following description categories were populated based on project description/activity code mapping:  • Information technology and communication costs • Rental and leasing costs |             |
|       |           |            |                        |        | Repairs and maintenance     Leasing and rental costs  |             |

<sup>&</sup>lt;sup>2</sup> Labour cost element mapping was not overridden based on project descriptions and activity/service category code mapping.

| Table |           |      | Population Approach Source |        | Methodology   | Assumptions |
|-------|-----------|------|----------------------------|--------|---|-------------|
| Name  | Reference | Item | Actual /<br>Estimate       | Source | Methodology   | Assumptions |
|       |           |      |                            |        | Note: Insurance costs are included in the enterprise supports costs which are shared across the Jemena Group, therefore a \$nil value has been reported for Direct Insurance costs.   |             |
|       |           |      |                            |        | Earnings before Interest and tax (EBIT) EBIT is calculated as:  |             |
|       |           |      |                            |        | Total revenue (excluding Non-DDP revenue) less<br>Total costs (excluding Non-DDP opex)  |             |
|       |           |      |                            |        |   |             |
|       |           |      |                            |        | Non-DDP direct costs and Non-DDP shared costs   |             |
|       |           |      |                            |        | Non-DDP direct costs and Non-DDP shared costs were estimated by aggregating the following amounts and then  |             |
|       |           |      |                            |        | removing them from the DDP Opex stack:  |             |
|       |           |      |                            |        | <ul> <li>Specially identifiable non-DDP non-routine maintenance (actual)</li> <li>Management expert estimate of the non-DDP routine maintenance costs based on technical understanding and experience of the routine maintenance requirements for the key components making up the Atlas asset (estimate)</li> <li>Non-Maintenance costs calculated as non-DDP</li> </ul> |             |
|       |           |      |                            |        | revenue as a percentage of total revenue<br>multiplied by the remaining DDP non-<br>maintenance opex stack. (estimate)  |             |

| Table   | Base      | Information                                   | Population<br>Approach | Source  | Mathadalam  | Assumations |
|---|-----------|---|------------------------|---|---|-------------|
| Name  | Reference | ltem  | Actual /<br>Estimate   | Source  | Methodology   | Assumptions |
|   |           |   |                        |   |   |             |
| Table 2.1<br>Statement<br>of pipeline<br>revenues | 2.1.c     | Depreciation,<br>Shared Asset<br>Depreciation | Actual                 | SAP – Fixed Asset Movement Report (FAMR) and Equipment Register                                 | SAP FAMR A detailed FAMR was downloaded from SAP.   | N/A         |
| and<br>expenses                                   |           |   |                        | The SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill) | SGSPAA Group Consolidation supporting schedule Depreciation expense was extracted from the SGSPAA Group Consolidation supporting schedule for pipeline assets not included in the SAP FAMR.   |             |
|   |           |   |                        |   | Total depreciation was based on the mapping of the individual assets in the FAMR applied in Table 3.3 Depreciation. DDP used the FAMR Asset descriptions, category and equipment register descriptions to map individual assets into specific categories. |             |
|   |           |   |                        |   | All depreciation expenses are recorded directly within the Pipeline and are not transferred from a related party entity and therefore are reported in the 'Amounts excluding related party transactions' column.  |             |
|   |           |   |                        |   | Reconciling difference between Table 2.1 Depreciation with Table 3.3.1 Current year depreciation  |             |

| Table | Base Information |          | Source | Methodology Assumptions | Accumptions   |  |
|-------|------------------|----------|--------|-------------------------|---|--|
| Name  | Reference        | Actual / | Source | Methodology             | Assumptions   |  |
|       |                  |          |        |                         | The AER template file includes a Summary worksheet with a reconciliation between Table 2.1 Depreciation with Table 3.3.1 Current year depreciation. Where there is a reconciling difference between the two tables it is attributable to disposals of assets in the current year resulting in a reversal of accumulated depreciation in the SAP ledger (Balance sheet entry only) reported only in Table 3.3.1 Current year depreciation. Table 2.1 is the relevant source to refer to for depreciation expense impacting the Profit and loss template in the current year. |  |
|       |                  |          |        |                         | Non-DDP Asset Depreciation  Refer to BoP Reference 3.3.1.a for the methodology applied to remove depreciation expense attributable to Non-DDP assets.   |  |

## 4. REVENUE BY SERVICE

| Table                                    | Base      | ase Information Population Approach  |  | Source        | Methodology  | Assumptions  |
|--|-----------|--|--|---------------|--|--|
| Name                                     | Reference | Item   | Actual /<br>Estimate   | Source        | Methodology  | Assumptions  |
| Table<br>2.1.1:<br>Revenue<br>by service | 2.1.1.a   | Description, Reporting period - Amount excluding related party transactions, Reporting period - Related party transactions | eporting period - nount excluding lated party ansactions, eporting period - elated party  (except for estimate of revenue attributable to Atlas) | PypIT and SAP | Description The 'description' categories are pre-populated by the AER for this template.  Reporting period -Amount excluding related party transactions Revenue by service is sourced from the Weighted Average Price (WAP) template where a revenue transaction report that discloses revenue by service types, was downloaded from the PypIT system for the reporting period. A Subject Matter Expert mapped the revenue service types against the relevant 'Service description' categories based on knowledge and the nature of the underlying revenue transactions. DDP has also included other revenue items that are not sourced from PypIT. These include miscellaneous revenue items such as profit from sale of fixed assets and revenue from non-gas transportation activities. | Published reference tariffs are an appropriate price basis to calculate the revenue attributable to DDP1 & DDP3. |
|  |           |  |  |               | Firm forward haul transportation services removing Non-DDP revenue  The relevant Atlas services form part of a single delivered service and are not charged in their separate component parts.  The Non-DDP portion of the revenue which needs to be removed from the DDP financial templates has been calculated as the balance remaining after deducting the   |  |

## 4 — REVENUE BY SERVICE

| Table<br>Name | Base Information |      | Population<br>Approach | Source | Mathadalawa   | Assumptions |
|---------------|------------------|------|------------------------|--------|---|-------------|
|               | Reference        | Item | Actual /<br>Estimate   | Source | Methodology   | Assumptions |
|               |                  |      |                        |        | revenue attributable to DDP1 & DDP3. The revenue attributable to DDP 1 and DDP 3 was calculated by applying the published reference tariffs to the relevant gas volumes.  Other pipeline services (if relevant) Includes:  Items that are miscellaneous in nature. DDP collects such items using cost elements and projects; and Exempt WAP services. |             |

## 5. REVENUE – CONTRIBUTIONS

| Table<br>Name   | Base  | Information | Population<br>Approach | Source | Methodology  | Assumptions |
|---|---|-------------|------------------------|--------|--|-------------|
|   | Reference                                       | Item        | Actual /<br>Estimate   | Source | methodology  |             |
| Table 2.2.1:<br>Customer<br>contributions<br>received   | No BoP<br>Reference<br>cells in the<br>template | N/A         | Actual                 | SAP    | No customer contributions revenue was received during the reporting period as such amounts would have been recorded against an appropriate cost element in DDP's TB.   | N/A         |
| Table 2.2.2:<br>Government<br>contributions<br>received | No BoP<br>Reference<br>cells in the<br>template | N/A         | Actual                 | SAP    | No government contributions revenue was received during the reporting period as such amounts would have been recorded against an appropriate cost element in DDP's TB. | N/A         |

## 6 — INDIRECT REVENUE

## 6. INDIRECT REVENUE

| Table   | Base I    | nformation | Population<br>Approach | Sauras | Mathadalagy  | Assumptions |
|---|-----------|------------|------------------------|--------|--|-------------|
| Name  | Reference | ltem       | Actual /<br>Estimate   | Source | Methodology  |             |
| Table 2.3.1:<br>Indirect<br>revenue<br>allocation | N/A       | N/A        | Actual                 | SAP    | No Indirect revenue was allocated to DDP during the reporting period as such amounts would have been recorded against an appropriate cost element in DDP's TB. | N/A         |

### 7. SHARED COSTS

| Table<br>Name                            | Base      | formation Population Approach   |                      | Source | Methodology   | Assumptions  |
|--|-----------|---|----------------------|--------|---|--|
|  | Reference | Item  | Actual /<br>Estimate | Source | Methodology   | Assumptions  |
| Table 2.4.1<br>Shared Cost<br>Allocation | 2.4.1.a   | Description categories, Shared costs excluding related parties, Shared costs paid to related parties, (Gross shared costs), Percent allocated to pipeline, Total allocated to pipeline excluding related parties, Total related party amounts allocated to pipeline (Net shared costs). | Actual               | SAP    | Shared Costs relate to enterprise support functions such as executive management, finance, legal, information technology (IT), human resources etc.  Description categories  The cost element description field from costs within DDP was used to map into the template's categories (e.g. 'wages', 'other direct costs', 'employee costs', 'indirect operating expenses', etc.).  Project descriptions were also used as a basis to categorise costs into description categories (e.g. 'Information technology and communication costs').  Where project descriptions and activity/service category codes supported classification within a more specific category then the cost element based mapping was overridden <sup>3</sup> . The following description categories were populated based on project description/activity code mapping:  • Information technology and communication costs  • Rental and leasing costs | The causal drivers that allocate shared costs to DDP are a reasonable method for such allocations. |

<sup>&</sup>lt;sup>3</sup> Labour cost element mapping was not overridden based on project descriptions and activity/service category code mapping.

## 7 — SHARED COSTS

| Table | Base Information |      | Population<br>Approach | Source | Methodology   | Assumptions |
|-------|------------------|------|------------------------|--------|---|-------------|
| Name  | Reference        | Item | Actual /<br>Estimate   | Source | Methodology   | Assumptions |
|       |                  |      |                        |        | Related party and non-related party:     Shared costs excluding related parties     Where project costs are allocated directly to the pipeline and not through a related party entity they were reported in the 'Shared costs excluding related parties' column. Shared asset depreciation is the only value included in this column as depreciation is based on shared assets purchased by the Jemena Group and allocated to DDP.     Shared costs paid to related parties.     The gross shared costs paid to related parties e.g. Finance, Legal, Managing Director are the total shared costs incurred across the Jemena Group before |             |
|       |                  |      |                        |        | allocating to specific assets (e.g. pipelines, distribution networks etc.). Gross shared costs are collected in SAP at the JAM entity. It is at this entity that the allocation of shared costs occur. These allocated costs are transferred to DDP using SAP functionality and mapped into the template categories based on a methodology consistent with the approach outlined above for net shared costs, therefore based on:  |             |
|       |                  |      |                        |        | cost element mapping; and     project descriptions and activity/service category codes      Percent allocated to pipeline and total allocated to pipeline excluding related parties  As described above, the majority of costs that DDP incurs are sourced from a related entity JAM which records costs  |             |

| Table | Base Information |      | Approach             | Source | Methodology  | Assumptions |
|-------|------------------|------|----------------------|--------|--|-------------|
| Name  | Reference        | Item | Actual /<br>Estimate | Source | Methodology  | Assumptions |
|       |                  |      |                      |        | that are attributable to DDP and uses SAP functionality that transfers such costs at zero margin to DDP. These costs are reported in the 'Shared costs paid to related parties' column.  |             |
|       |                  |      |                      |        | Shared costs are allocated to the pipeline in the following ways:  • Directly to the asset through a PM Order which is the lowest level cost collector. PM Order's settle or cascade up to a specific project (WBS) in SAP.  • Based on allocation methodologies such as historic time-writing data.  • Causal drivers e.g. number of laptops users for IT Telecommunication costs.  The costs allocated to each shared cost category (e.g. 'Employee costs', 'information technology and communication costs' etc.) is an aggregate of one or more projects with varying cost allocation percentages from the different shared functions. |             |
|       |                  |      |                      |        | The percentage allocated to a pipeline is calculated as:  Amounts allocated to pipeline divided by the gross amount across the Jemena Group.  The shared costs allocated to the pipeline is sourced from   |             |
|       |                  |      |                      |        | SAP using a combination of projects and cost elements.   |             |

### 8 — STATEMENT OF PIPELINE ASSETS

## 8. STATEMENT OF PIPELINE ASSETS

| Table<br>Name                    | Base Information |  | Population<br>Approach | Source  | Mathadalami  | Assumptions   |
|----------------------------------|------------------|--|------------------------|---|--|---|
|                                  | Reference        | ltem   | Actual /<br>Estimate   | Source  | Methodology  | Assumptions   |
| Table 3.1:<br>Pipeline<br>assets | 3.1.a            | Initial construction or acquisition costs, Additions, Capitalised maintenance or improvements, Disposals or early termination (at cost), Depreciation. | Actual                 | Table 3.3.1: Fixed assets at cost - pipeline assets  Table 3.3.2: Shared assets at cost (less straight line depreciation) | All items were populated based on Australian Energy Regulator (AER) designed formulas which referenced the supporting 'Table 3.3.1: Fixed assets at cost - pipeline assets'. and 'Table 3.3.2: Shared assets at cost'  Non-core pipeline assets  No allocation of non-core pipeline assets has been included in Table 3.1 where there is a remote nexus with the pipeline activities such as treasury hedging financial instruments, defined benefit assets, minor assets sitting in JAM (receivables etc.), and other corporate assets etc.  Non-DDP Assets  Refer to BoP Reference 3.3.1.a for the methodology applied to remove non-DDP Assets from the template. |   |
| Table 3.1:<br>Pipeline<br>assets | 3.1.a.1          | Other non-<br>depreciable pipeline<br>assets   | Actual                 | The SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill)                           | Other non-depreciable pipeline assets - SGSPAA Group Consolidation support schedule  The SGSPAA Group consolidates its resulting Goodwill from acquisitions at a SGSPAA level, meaning that it does not pass-on any Goodwill into its subsidiary entities. The business combination adjustments are maintained in an excel spreadsheet outside the SGSPAA Group's SAP  | As there is no specific<br>Goodwill category, DDP has<br>included Goodwill in the<br>'Other non-depreciable<br>pipeline assets' in the<br>template. |

## STATEMENT OF PIPELINE ASSETS — 8

| Table<br>Name | Base I    | nformation                      | Population<br>Approach | Source      | Methodology  | Assumptions |
|---------------|-----------|---------------------------------|------------------------|-------------|--|-------------|
|               | Reference | eference Item Actual / Estimate | Source                 | Methodology | Assumptions  |             |
|               |           |                                 | Estimate               |             | system and allocated to the SGSPAA Group's cash generating units (e.g. pipelines) for the purpose of impairment testing, in accordance with Australian Accounting Standards. The Guideline does not restrict consideration to only those assets identifiable at the direct pipeline owning entity level and accordingly DDP allocated Goodwill to the pipeline in its statement of assets. DDP considered this a reasonable allocation and disclosure.  Other non-depreciable pipeline assets – SAP TB  Amounts have been extracted from DDP's Trial Balances for the reporting period and include GL accounts such as accrued receivables, inventories, deferred tax assets and amounts due from related parties.         |             |
|               |           |                                 |                        |             | SAP has functionality that records and identifies any transactions from related parties to DDP, known as trading partner. Related party loan accounts with each trading partner entity were aggregated, where the receivable amount was greater than the payable amount the net amount was reported in 'Other non-depreciable pipeline assets'. Where the payable amount was greater than the receivable amount the balance was a net liability and therefore not included in 'Other non-depreciable pipeline assets' in the template. DDP has a legally-enforceable right to set off the recognised amounts and DDP intends either to settle on a net basis or realise the asset and settle the liability simultaneously. |             |

## 8 — STATEMENT OF PIPELINE ASSETS

| Table                            | Base      | Information                                    | Population<br>Approach | Source   | Methodology   | Assumptions |
|----------------------------------|-----------|--|------------------------|--|---|-------------|
| Name                             | Reference | Item   | Actual /<br>Estimate   | Source   | Methodology   | Assumptions |
|                                  |           |  |                        |  | In accordance with accounting standards DDP has netted off deferred tax assets and liabilities in its Balance Sheet.  Non-DDP Other Assets  Trade debtor receivable amounts attributable to non-DDP assets as at year end have been removed from the Other Assets amount. Refer to BoP Reference 2.1.1.a for the methodology applied to Non-DDP attributable revenue (and associated trade debtor). |             |
| Table 3.1:<br>Pipeline<br>assets | 3.1.b     | Inventories, Deferred tax assets, Other assets | Actual                 | The SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill)  SAP | DDP's Inventories, deferred tax assets and other assets are not shared assets, they form part of Pipeline Assets and are reported on the row 'Other non-depreciable pipeline assets'. (refer to BoP reference 3.1.a for further details).   | N/A         |

## 9. ASSET USEFUL LIFE

| Table<br>Name                  | Base Information |  | Population Approach Source | Mathadalam   | Assumptions   |             |
|--------------------------------|------------------|--|----------------------------|--|---|-------------|
|                                | Reference        | Item   | Actual /<br>Estimate       | Source   | Methodology   | Assumptions |
| Table 3.1.1: Asset useful life | 3.1.1.a          | Description (list each individual balance sheet item), Acquisition date, Useful life years, Reason for choosing this useful life | Actual                     | Table 3.3.1: Pipeline assets at cost  Table 3.3.2: Shared assets at cost | Description (list each individual balance sheet item)  The 'Description' column was referenced from the 'Description' column as listed in:  • Table 3.3.1: Pipeline assets at cost • Table 3.3.2: Shared assets at cost  Assets under construction (AUC) are assets that are still in the process of being constructed and not yet installed ready for use, therefore they are excluded from Table 3.1.1.  Acquisition date  The assets in the FAMR sourced from SAP, have been aggregated into similar 'Description' items in Table 3.1.1. As there were numerous individual assets in the FAMR therefore the acquisition date is reported as 'various acquisition dates'.  Useful life years  A FAMR lists individual assets that contain the following information:  • Asset description (text field) • Depreciation start date (date field) • Estimated useful life (years) • Original Cost (\$) • Acquisition (\$) (includes Transfers) • Disposals/retirements (\$) • Accumulated depreciation (\$) | N/A         |

## 9 — ASSET USEFUL LIFE

| Table | Base      | Information | Population<br>Approach | Source | Mathadalam  |             |
|-------|-----------|-------------|------------------------|--------|---|-------------|
| Name  | Reference | ltem        | Actual /<br>Estimate   | Source | Methodology   | Assumptions |
|       |           |             |                        |        | <ul> <li>Depreciation for the year (\$)</li> <li>Depreciation retirements (\$)</li> <li>Closing book value (\$)</li> </ul>  |             |
|       |           |             |                        |        | The useful life for each category was calculated based on the calculated weighted average cost useful life formula below with the information sourced from FAMR.                            |             |
|       |           |             |                        |        | Weighted average cost useful life equals:  \[ \sum_{\text{(Opening Cost + Aquisitions + Retirements)}}{\text{Total 'Description' Cost}} \]  * Asset useful life                             |             |
|       |           |             |                        |        | Note that the Total Description Costs is the sum of Opening cost + Additions– Retirements.  |             |
|       |           |             |                        |        | Reason for choosing this useful life  |             |
|       |           |             |                        |        | The economic useful life of individual assets is defined in terms of the Australian Accounting Standards and the asset's expected use to DDP which may not fall within the Guideline's      |             |
|       |           |             |                        |        | Appendix A – Pipeline asset lives. The estimation of the economic useful life of an asset is a matter of judgement based  |             |
|       |           |             |                        |        | on the Jemena Group's experience with similar assets.  Additionally, economic useful life shall be considered in relation to the life assigned to similar assets within the asset category. |             |

## 10. ASSET IMPAIRMENT

| Table   | Base  | Information  | Population<br>Approach | Source | Methodology   | Assumptions |
|---|---|--|------------------------|--------|---|-------------|
| Name  | Reference   | Item   | Actual /<br>Estimate   | Source | Methodology   | Assumptions |
| Table<br>3.2.1:<br>Assets<br>impaired               | BoP<br>reference<br>field not<br>included in<br>table | Asset description,<br>Impairment<br>amount \$ nominal,<br>Impairment date,<br>Basis for<br>impairment  | Actual                 | SAP    | Management tested the DDP Cash Generating Unit, including allocated goodwill for impairment as part of its usual annual impairment testing for December 2022 financial reporting purposes in accordance with Australian Accounting Standard requirements, with no impairment recognised. In assessing the position as at December 2022, management considered both external and internal indicators of impairment such as; changes in the regulatory environment, current and future performance, asset characteristics, physical damage, business environment and market conditions. No impairment was noted as part of testing indefinite life intangible assets therefore no impairment has been recognised for the year ended 31 December 2022. | N/A         |
| Table<br>3.2.2:<br>Asset<br>impairment<br>reversals | BoP<br>reference<br>field not<br>included in<br>table | Asset description, Prior Impairment amount \$ nominal, Impairment date, Basis for impairment, Reversal amount \$nominal, Reversal date, Basis for Reversal | Actual                 | SAP    | No assets impairment reversals were recorded during the reporting period.   | N/A         |

# 11 — DEPRECIATION

## 11. DEPRECIATION

| Table  | Base I    | nformation   | Population<br>Approach | Source   | Methodology  | Assumptions |
|--|-----------|--|------------------------|--|--|-------------|
| Name   | Reference | Item   | Actual /<br>Estimate   | Source   | Methodology  | Assumptions |
| Table 3.3.1: Pipeline assets at cost - pipeline assets &  Table 3.3.2: Shared assets at cost (less straight line depreciation) | 3.3.1.a   | Description, Category, Acquisition date, Useful life, Estimated residual value, Initial construction or acquisition cost, Additions, Capitalised Maintenance or improvements, Disposals or Early termination, Cost Base, Prior years' accumulated depreciation Current year depreciation, Written Down Value | Actual                 | SAP FAMR and equipment listing report  The SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill) | The FAMR lists individual assets and was downloaded from SAP.  Category  Each asset was mapped into the relevant categories provided in the AER template drop down list (e.g. Pipeline, Compressor, City Gates etc.) based on:  • analysis of the FAMR Asset description & Asset class;  • input from engineers and subject matter experts; and  • where relevant, analysis of a separate corresponding equipment listing report which contains more detailed information than the FAMR.  DDP used subject matter experts to map its asset categories to that in the template as DDP's SAP system was designed prior to the establishment of the GMR reporting regime.  Description  The asset description was mapped to the categories in the template except AUC Network which was not included in the AER's drop down list of categories.  AUC are assets that are still in the process of being constructed and not yet installed ready for use. Therefore depreciation expense was not yet applied. | N/A         |

| Table | Base I    | nformation | Population<br>Approach | Source | Methodology   | Assumptions |
|-------|-----------|------------|------------------------|--------|---|-------------|
| Name  | Reference | Item       | Actual /<br>Estimate   | Source | Methodology   | Assumptions |
|       |           |            |                        |        | Acquisition date Refer to 'Acquisition date' explanation for Table 3.1.1 Asset useful life.  Useful life Refer to 'Useful life' explanation for Table 3.1.1 Asset useful life.  Estimated residual value DDP has estimated there to be no residual value for all pipeline assets which is in accordance with its internal Property, Plant and Equipment policy and aligns with AASB 116 Property, Plant and Equipment which recognises that in practice, the residual value of an asset is often insignificant and therefore immaterial in the calculation of the depreciable amount (AASB 116(53)).  Construction or acquisition cost The 'Construction or acquisition cost' column value (\$) was populated for each 'Description' item based on the FAMR data which was aggregated because there were too many separate assets in the FAMR to report them separately in Table 3.3.1. The 'Original cost' of assets in the FAMR were aggregated based on asset 'Description' where the 'Depreciation start date' value was prior to the SGSPAA acquisition of the pipeline on 6 June 2017. Fair value uplift adjustments has been applied to the applicable categories in the template. |             |

## 11 — DEPRECIATION

| Table | Base I    | nformation | Population<br>Approach | Source | Methodology   | Assumptions |
|-------|-----------|------------|------------------------|--------|---|-------------|
| Name  | Reference | Item       | Actual /<br>Estimate   | Source | Methodology   | Assumptions |
|       |           |            | Estimate               |        | Prior year disposal removed from the 'Construction or acquisition cost' were added back to report a life to date 'Construction or acquisition cost' (refer to disposal explanation below for methodology explanation) prior to SGSPAA's acquisition of the pipeline during June 2017.  Additions  The 'Additions' column was populated for each description item based on the FAMR data which was aggregated because there were too many separate assets in the FAMR to report them separately in Table 3.3.1. The 'Original cost' and the 'Acquisition' value of assets in the FAMR were aggregated based on asset 'Description' where the 'Depreciation start date' value was after SGSPAA's acquisition of the pipeline during June 2017.  Prior year disposals removed from the original cost were added back to report a life to date original cost after SGSPAA's acquisition of the pipeline during June 2017.  Capitalised Maintenance  DDP does not have any capitalised maintenance. Maintenance costs such as day to day servicing including labour, consumables and spare parts are excluded from measurement of an item of PPE in accordance with the SGSPAA Group's PPE policy and AASB 116 (12). |             |
|       |           |            |                        |        | <u>Disposals</u>  |             |

| Item | Actual /<br>Estimate | DDP took reasonable steps to source historical disposal information but was unable to obtain FAMR transactional data from the previous owner.   | Assumptions   |
|------|----------------------|---|---|
|      |                      | information but was unable to obtain FAMR transactional data  |   |
|      |                      |   |   |
|      |                      | Prior years' accumulated depreciation   |   |
|      |                      | Sourced based on the aggregation of prior year GMR template's:  • Prior years' accumulated depreciation   |   |
|      |                      | Current year depreciation   |   |
|      |                      | <u>Current year depreciation</u>  |   |
|      |                      | The 'Current year depreciation' values in the FAMR were aggregated for each 'description' row and then populated in this column of the table. Accumulated fair value uplift depreciation has been applied to the applicable categories in the template. Fair value uplift depreciation has been applied to the applicable categories in the template. |   |
|      |                      | Reversal of accumulated depreciation in the FAMR (Balance sheet entry only) upon disposal of an asset was recorded in this column of the table.   |   |
|      |                      | Written down value  The 'Written down value' of all assets in table 3.3.1 was aggregated.   |   |

| Name  | Reference | ltem   | Actual /<br>Estimate   | Source   | Methodology   | Assumptions |
| Table 3.4.1: Shared supporting asset allocation | 3.4.1.a   | Description (list each individual shared asset category greater than 5 percent), Category of shared assets, Total amount, Percent allocated to pipeline, Total allocated to pipeline | Actual                 | SAP – FAMR & project cost download for Shared Assets Capex at DDP's level. | Description (list each individual shared asset category greater than 5%)  Shared asset 'Asset class description' in the FAMR were reported in Table 3.4.1.  Category of shared assets  The 'Category of shared assets' was reported as 'Other assets' based on the nature of the asset additions and referenced to the drop down list of categories in Table 3.3.2.  Total amount  Costs are collected in projects (WBS elements) in SAP based on the activity, on which an employee works or an external supplier provides goods/services. For shared assets the capex costs are collected in a WBS element before allocating the shared asset costs to the relevant pipelines/distribution network assets. DDP aggregates the shared asset additions into the relevant asset classes as per the template.  % allocated to pipeline  The percentage allocated to the pipeline was calculated as: 'Total allocated to the pipeline' divided by the 'Total Amount' Where:  • 'Total allocated to the pipeline' is defined below; and | N/A         |

|                      |                      | Base Information |   |                                   |  |  |  |
|----------------------|----------------------|------------------|---|-----------------------------------|--|--|--|
| Table Name           | Asset<br>Description | Year             | Item & Basis of<br>Preparation (BoP)<br>Reference | Actual /<br>Estimate <sup>4</sup> | Source   | Methodology  | Assumptions  |
| - pipeline<br>assets | Description          |                  | Reference   | Estimate                          | the Reporting Period  SAP Trial Balance and FAMR for DDP 1, DDP 2 & DDP 3 for the Reporting Period | Net tax liability is calculated as:  ((Profit/(loss) before interest, tax, depreciation and amortisation  Less tax depreciation  Less interest expense)  Multiplied by the tax rate (i.e. 30 percent).  Where:  Profit/(loss) before interest, tax, depreciation and amortisation equals Revenue less Operating expense explained above.  Tax Depreciation (2005 – 2022) was calculated as: Total Assets divided by tax useful life. The selection of this tax asset life most closely aligns calculated tax depreciation across all component pipelines over 2013 to 2016 with Jemena Group's reported accounting depreciation.  Interest Expense (2005-2022) was calculated as: Opening assets multiplied by gearing ratio multiplied by cost of debt.  The accounting profit and loss has been reviewed to identify material non-cash items that may require adjustment for when estimating the net tax liability cash flow (e.g. Accounting depreciation expense). | payable if the pipeline was a stand-alone entity.  When estimating each year's tax depreciation, current year net capex was assumed to be incurred mid-year and therefore only a half year of tax depreciation was incurred.  The value of imputation credits to shareholders are not included in the RCM valuation. |
|                      |                      |                  |   |                                   |  | Interest costs were not allocated down to the pipeline asset level. A notional interest allocation has been included in the net tax liabilities calculation.   |  |

|            |                      |            |   |                                   | Cost of debt and risk free rate input source: Reserve Bank of Australia, Indicative Mid Rates of Australian Government Securities – 1992 to 2008 – F16, and Indicative Mid Rates of Australian Government Securities – 2009 to 2015, Capital Market Yields Government Bonds – Monthly – F2.1 – 1990 to 2022, and Aggregate Measures of Australian Corporate Bond | The service provider considers that a gearing that is consistent with the formulation of asset beta is 50 percent.  Cost of debt  The cost of debt in each year is estimated as a prevailing cost of debt across the RCM capital base using the yield on corporate bonds with a broad BBB rating, and terms ranging from one to 10 years.  A 10 year yield on Australian Government Securities (AGS) was calculated on each day using linear interpolation between the yield of the bond with the highest term that is less than 10 years and the yield of the bond with the lowest term that is more than 10 years.  Each interpolated 10 year yield was then converted from the semi-annual basis that the RBA reports them on to an annualised basis to reflect their application consistent with the calculation of the asset valuation <sup>5</sup> ; and | This assumption is also applied to previous shareholders.  Cost of debt and tenor assumptions The cost of debt is calculated under the assumptions that: DDP aims to achieve a debt portfolio that is 'staggered' so that debt falls due in relatively equal amounts on a year to year basis, limiting refinancing risk; and DDP aims to achieve a debt portfolio with an average term to maturity from issuance of 10 years. |

 $<sup>^{5}</sup>$  We convert semi-annual yields to annualised yield using the following formula:  $y_{annual} = \left(1 + \frac{y_{semi-annua}}{2}\right)^{2} - 1$

|            |                      |             |   |                                   | Equity beta input source: ACCC – final decision PTS (Nov 2002); AER – electricity and distribution WACC parameters (May 2009); AER – rate of return guideline (Dec 2013); AER – rate of return instrument (Dec 2018) | An average 10 year yield was calculated for each period as the average of the 12 month-end values in that period. | Cost of equity assumptions  DDP estimates the cost of equity based on an acceptable return that is commensurate with the expected risk SGSPAA shareholders expect from this asset.  This value is calculated under the assumption that, for the duration of each gas transportation contract for capacity agreed on the DDP, the cost of equity applying to the capital expenditure associated with that capacity is held constant at the rate applying at the time the contract was entered into until the expiry of the contract. |

These represent terms that were necessary in order for an arm's length party to have sufficient certainty to acquire and operate the DDP. Consistent with this, for the purpose of estimating the cost of equity, we assume that the current contractual arrangements were formed in the year prior to the construction of each component pipeline, rather than their actual signing date in 2017. |

#### **Explanation for Estimated Amounts**

For estimated amounts, in accordance with the Guideline Section 7 basis of preparation, the following table explains:

- why it was not possible for the **service provider** to provide actual information;
- what steps the **service provider** took to locate actual information;
- if an estimate has been provided, the basis for the estimate, including the methods, assumptions and inputs used
- why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.

#### **ESTIMATED INFORMATION**

| pipeline<br>assets |                      |              |                       |                        | inherently required to measure future costs.  Further, the actual timing of decommissioning the pipeline in the future is also uncertain, therefore increasing the level of estimation required.  In addition, the CPI escalation factor and the discount rate inputs are estimates used to inflate for forecast future price increases and then discount to the present value respectively. |                               | decommissioning the pipeline.                               | which are sourced based on best available information:  Technical engineering estimate of the cost to decommission the pipeline.  Discount rate: 5 year average for the 15 year Australian Government Securities (AGS) bond rate.  CPI escalation: SGSPAA internal CPI estimate (reasonable when compared with Australian Bureau of Statistics (ABS)/Reserve Bank of Australia (RBA) rate).  Estimated year of decommissioning the pipeline. |

|  |                      | Base Information  |                     |                  |  | Steps SGSPAA took   | Basis for the estimate,  | Why the estimate represents the best estimate possible   |
|--|----------------------|---|---------------------|------------------|--|---|--|--|
| Table<br>Name  | Asset<br>Description | Why it was not possible to locate actual for the SGSPAA to provide information; |                     | to locate actual | including the<br>methods,<br>assumptions and<br>inputs used  | in the circumstances and has been arrived at on a reasonable basis.             |  |  |
| Table 4.1:<br>Recovered<br>capital<br>method –<br>pipeline<br>assets | Pipeline<br>Assets   | 2005 – 2017   | Disposals (at cost) | Estimate         | SAP FAMR and general ledger transactional data was not available prior to the SGSPAA ownership period. | Information requests were sent to previous owners but no response was received. | Analysis of SAP FAMR reports since acquisition did not identify a significant level of disposals. Therefore it is unlikely that there would be a material level of proceeds on disposal to use as an input. The SAP FAMR does not report on proceeds on disposals but it can be used as a reference point to assess the level of disposals.  Pipelines are a stable asset and it is reasonable to expect that there would be low levels of asset disposals and therefore proceeds on disposals of pipeline | Data from the SGSPAA ownership period is actual data. This actual data represents the best source for arriving at a best estimate. |

|  |                      | Base Informa | ition                 | Population<br>Approach |   | Steps SGSPAA took                                   | Basis for the estimate,  | Why the estimate represents the best estimate possible  |

| Table 4.1:<br>Recovered<br>capital<br>method –<br>pipeline<br>assets | Return of capital      | 2005 – 2022  | Rate of return        | Estimate               | The Guideline advises that the rate of return should be determined each year and should be commensurate with the prevailing conditions in the market for funds and reflect the risk the service provider face in providing pipeline services.  The Guideline Explanatory Statement (pg. 25) advises with regard to the 'Commercial rate of return' that 'Service provides will be able to determine how this input is estimated'. Usage of the term 'estimated' in the Guideline Explanatory Statement implies that SGSPAA is required to estimate this data input. | Actual information does not exist for the rate of return.  SGSPAA estimated the rate of return as a WACC and sourced actual data to input into the WACC calculation.  The rate of return is a theoretical concept and does not reference DDP costs, rather it references regulatory decisions that have been applied to the relevant time period. | Refer to Table 4.1: Recovered capital method – pipeline assets -rate of return explanation above. | Using a WACC as an estimate for rate of return is an accepted methodology adopted by the Australian Energy Regulatory (AER) and therefore represents the best estimate possible.  The data inputs into the WACC have been sourced from published AER accepted sources and therefore is a best estimate which has been arrived at on a reasonable basis. |

## 14. PIPELINE DETAILS

| Table Name                  | Item                    | Actual / Estimate | Source   | Methodology   | Assumptions   |
|-----------------------------|-------------------------|-------------------|--|---|---|
| Table 4.2: Pipeline details | Construction date       | Actual            | SAP FAMR   | Extracted the year of construction from the FAMR for the construction assets.             | Construction date is interpreted as the mid-point of the year when construction commenced based on reference to the FAMR. |
| Table 4.2: Pipeline details | Negative residual value | Estimate          | Refer to 'Table 4.1: Recovered capital method - pipeline assets' source. | Refer to 'Table 4.1: Recovered capital method - pipeline assets' methodology explanation. | Refer to 'Table 4.1: Recovered capital method - pipeline assets' assumptions.   |

## 15 — CAPITAL EXPENDITURE

## 15. CAPITAL EXPENDITURE

| Table  | Base Information |   | Population<br>Approach | Source                             | Mathadalagu   | Assumptions   |  |
|--|------------------|---|------------------------|------------------------------------|---|---|--|
| Name   | Reference        | Item  | Actual /<br>Estimate   | Source                             | Methodology   | Assumptions   |  |
| Table 4.1.1:<br>Capital<br>expenditure<br>greater than<br>5 percent of<br>construction<br>cost | 4.1.1.a          | Description of<br>works, Date<br>recognised,<br>Expenditure (\$<br>nominal) | Actual                 | SAP (Referencing the RCM template) | DDP analysed the underpinning data for the RCM template and with a view to identifying any projects where capex is greater than 5% of the construction cost. DDP had capex that met the criteria of the template in 2017 and 2018.  2017 and 2018:  DDP extracted Description of works, Date recognised and Expenditure (\$ nominal) from the SAP FAMR.  Mid-point Net Capital Expenditure Gross Up  SAP FAMR Expenditure (\$ nominal) are escalated to a mid-year point to account for the return on capital for capital expenditure incurred during the year.  Mid Point Gross Capex  = Capex × (1 + Rate of Return percentage) <sup>0.5</sup> The Rate of Return percentage input calculation methodology is further explained with the Recovered Capital Method above (refer to 'Rate of Return' item). | DDP has interpreted that the capex required in the template is for the life to date basis for the pipeline. |  |

## 16. WEIGHTED AVERAGE PRICES

| Table<br>Name                              | Base Information |        | Population<br>Approach | Source  | Methodology  | Assumptions  |
|--|------------------|--------|------------------------|---|--|--|
|  | Reference        | Item   | Actual /<br>Estimate   | Course  | incurodorogy   | Assumptions  |
| Table 5.1<br>Weighted<br>average<br>prices | 5.1.a            | Volume | Actual                 | The PypIT system is the billing/invoicing system in place which provides the detailed breakdown of volumes and revenue data by service type and shipper as well as the corresponding contract information. Hence, this would be the best source to provide data for the purposes of calculating the weighted average price since it is the only system that captures information related to revenue, volume and category breakdown and details in the same place. | Data extracted from PypIT is compared and checked against SAP balances and reference tariffs before being categorised accordingly based on service type per details below. Where necessary data has been manually categorised as follows:  Categorisation of Charge Method  The "Postage Stamp Transportation Services" represents revenue and volumes associated with Firm Forward_services. Per Section 5 of the Guideline, these services are where the same charge is payable along the length of the pipeline, irrespective of the distance transported. Firm services are charged on a capacity basis i.e. Maximum Daily Quantity (MDQ), while Backhaul services are charged on a volumetric basis (i.e. actual deliveries).  Volume Calculation  The volume used in the weighted average price calculation is based on the service type. For Firm Services, volumes are based on MDQ. To obtain the total relevant volumes for a particular month, the MDQ needs to be multiplied out by the number of days in the month. For As Available Backhaul, the actual delivery volumes would apply.  Volume data have been determined for each service and charge reported in the template by adjusting raw data obtained from the PypIT reports. Manual calculations have been | Some specific charges / services are not relevant to the weighted average price calculation (i.e. not part of the service categories required under the weighted average price template as specified in Section 5 of the Guideline). This is discussed further below.  In determining the total revenue to be used in calculating the weighted average price, there are certain service types which fall under " Other pipeline services (if relevant)" in Table 2.1.1 that were intentionally be omitted from the weighted average price calculation as it does not form part of the main pipeline revenue generating services. These services include: |

## 16 — WEIGHTED AVERAGE PRICES

| Table | Base Information |      | Population<br>Approach | Source | Methodology   | Assumptions   |  |
|-------|------------------|------|------------------------|--------|---|---|--|
| Name  | Reference        | Item | Actual /<br>Estimate   | Source | Methodology   | Assumptions   |  |
|       |                  |      |                        |        | performed to calculate the relevant volumes to be included in the WAP calculations. | - Minimum Monthly Service Charge  - Authorised Overrun Charge  - Unauthorised Overrun Charge  - Unauthorised Overrun Charge  - Imbalance Charge  - Odorisation Charge  - User Specific Facility Charge  The invoice data in PypIT reflects actual invoicing and has been used as the basis of allocation of revenue to services and charges. Based on the invoice data retrieved from PypIT, the revenue and volume data used in the weighted average price calculation is included/excluded based on the revenue charge type and service type categorisation.  The MDQ used in the calculation (as referred to in the methodology) is the applicable MDQ on the last day of the month. The |  |

## WEIGHTED AVERAGE PRICES — 16

| Table                                      | Base      | Information | Population<br>Approach   | Source                            | Methodology   | Accounting   |
|--|-----------|-------------|--|-----------------------------------|---|--|
| Name                                       | Reference | Item        | Actual /<br>Estimate   | Source                            | Metriodology  | Assumptions  |
| Table 5.1<br>Weighted<br>average<br>prices | 5.1.b     | Revenue     | Actual<br>(except for<br>estimate of<br>revenue<br>attributable<br>to Atlas) | PypIT & Scheduling Tool per above | Categorisation of data per above Volume Methodology.  Revenue Calculation  The revenue obtained in the report to be used in the weighted average price calculation is based on the sum of the relevant charges per the assumptions listed out in this paper. The relevant charges are added together to come to an adjusted revenue figure before it is used in the final weighted average price calculation.  Weighted Average Price Calculation | volume calculated is therefore only an estimated volume because there are instances where MDQ in the month is not constant on all days. For services where calculated volumes are materially different from the total invoiced volumes (typically where there have been curtailments or large MDQ changes), the invoiced volumes have been used.  Imbalance charges have been omitted from the weighted average price calculation as it does not form part of the main pipeline revenue generating services. Revenues from Imbalance charges fall under "Other Direct Revenue" in Table 2.1.1 and have been reported there instead |
|  |           |             |  |                                   | Weighted Average Price Calculation  |  |

## 16 — WEIGHTED AVERAGE PRICES
